CEQA ADDENDUM TO THE  
ENVIRONMENTAL IMPACT REPORT FOR THE COMMERCIAL CANNABIS LAND USE  
ORDINANCE

*Commercial Cannabis Land Use Ordinance Environmental Impact Report (EIR)  
(State Clearinghouse # 2017042022), January 2018*

**APN 032-171-027, County of Humboldt**

Prepared By  
Humboldt County Planning and Building Department  
3015 H Street, Eureka, CA 95501

January 2025

## Background

**Modified Project Description and Project History** - The original project reviewed under the Environmental Impact Report (EIR) for the Commercial Cannabis Land Use Ordinance (CCLUO) addressed the broad environmental impacts that could be expected to occur from the adoption and implementation of the ordinance. The EIR specified that the regulations established in the CCLUO would mitigate the impacts of existing cannabis operations by establishing regulations for an existing unregulated land use to help prevent and reduce environmental impacts that are known to result from unpermitted baseline cultivation operations. The EIR states that “Bringing existing operations into compliance will help to attenuate potential environmental effects from existing cultivation activities, including aesthetic impacts resulting from improper operation or poor siting.” The current project was contemplated by the EIR and compliance with the provisions of the CCLUO will fully mitigate all environmental impacts of the project to a less than significant level.

The Applicant is seeking to modify a Special Permit for a 10,000-square-foot outdoor cultivation operation on APN 032-171-027 (PLN-2019-15992) to convert the cultivation to a mixed-light operation. The Applicant was previously approved to operate an outdoor cultivation operation of 4,940 square feet in October 2019 and expanded the operation to 10,000 square feet in May 2020. The Applicant proposes to modify the license to allow for mixed light cultivation.

The Applicant estimates that an additional 35,790 gallons of water will be required annually for further cultivation activities and will experience an increase in power use. There will be no change in staffing needs, traffic volume, or hours of operation. The subject parcel’s water is served by the Garberville Sanitary District (GSD). Electricity is sourced from Pacific Gas and Electric and a backup generator.

The modified project is consistent with the adopted MND for the CCLUO because it complies with all standards of the CCLUO, which were intended to mitigate the impacts of existing cultivation. These include ensuring that onsite lighting adheres to Dark Sky Association standards and that project-related noise does not disturb nearby wildlife, thereby limiting the impacts on biological resources due to light and noise.

The Western bumble bee is the only mapped species of special concern mapped on the subject parcel by the California Natural Diversity Database (CNDDDB). An NSO sighting was mapped 1.78 miles away in 1920. The project is within 3.39 miles of a known Northern Spotted Owl Activity Center. The proposal to continue operation of an existing cannabis cultivation site is not expected to cause additional disturbance to this species for the following reasons: the potential impacts of the existing facilities are mitigated through

generator containment, shielding of artificial light between sunrise and sunset, and the requirement that noise be kept at 70.6 decibels or less at 100 feet away from the generator, property lines, and the edge of wildlife habitat. In addition, the applicant shall not use any synthetic netting on the project site, the applicant shall leave any wildlife that they encounter unharmed, and the applicant shall always contain all refuse in wildlife proof storage containers. Proposed ground disturbance includes installing a 2,500-square-foot greenhouse.

The modified project is consistent with the adopted EIR for the CCLUO because it complies with all standards of the CCLUO which were intended to mitigate for impacts of existing cultivation. These include compliance with noise and light standards to limit disturbance to wildlife, increased water storage to allow for complete forbearance from water diversion during the dry season, and proper storage of fertilizers and soil amendments.

**Purpose** - Section 15164 of the California Environmental Quality Act (CEQA) provides that the lead agency shall prepare an addendum to a previously certified Mitigated Negative Declaration (EIR) if some changes or additions are necessary but none of the conditions described in Section 15162 calling for a subsequent EIR or Negative Declaration have occurred. Section 15162 states that when an EIR has been certified for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

1. Substantial changes are proposed in the project which require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following: A) the project will have one or more significant effects not discussed in the previous EIR; B) significant effect previously examined will be substantially more severe than shown in the previous EIR; C) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or D) mitigation measures or alternatives which are considerably different

from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

### **Summary of Significant Project Effects and Mitigation Recommended**

No changes are proposed for the original EIR recommended mitigations. The proposal to authorize the minor changes to the approved project is fully consistent with the impacts identified and adequately mitigated in the original EIR. The project as conditioned to implement responsible agency recommendations, results in no significantly adverse environmental effects beyond those identified in the EIR. Compliance with the CCLUO ensures consistency with the adopted EIR and provides for mitigation of all project related impacts to a less than significant level.

### **Other CEQA Considerations**

Staff suggest no changes to the revised project

### **EXPLANATION OF DECISION NOT TO PREPARE A SUPPLEMENTAL MITIGATED NEGATIVE DECLARATION OR ENVIRONMENTAL IMPACT REPORT**

See Purpose statement above.

In every impact category analyzed in this review, the projected consequences of the current project proposal are either the same or less than significantly increased than the initial project for which the EIR was adopted. Based upon this review, the following findings are supported:

### **FINDINGS**

1. The proposed project will permit an existing cannabis operation to change from outdoor to mixed light into consistent with county and state requirements intended to adequately mitigate environmental impacts.
2. The circumstances under which the project was approved have not changed substantially. There are no new significant environmental effects and no substantial increases in the severity of previously identified effects.
3. For the current proposed project, there has been no new information of substantial importance, which was not known and could not have been known with the

exercise of reasonable diligence at the time the previous EIR was adopted as complete.

## **CONCLUSION**

Based on these findings it is concluded that an Addendum to the certified EIR is appropriate to address the requirements under CEQA for the current project proposal. All of the findings, mitigation requirements, and mitigation and monitoring program of the EIR, remain in full force and effect on the original project.
