I can not verbally say in three minutes
All that I have already provided in writing

Ignoring and not taking serious what I present
means a lot of hurt and death
for many species and humans

I am forced to see those with the power and wanting to be re-elected or re-appointed
having no reason or gumption to know truths or solve problems
Will ignored working, taxpaying, low to low middle income, producing
folks wake-up and vote?

Protectionism and untruths are winning the day

- Clever use of Hi-tech electronic communication
has many untruths accepted as truths by a routinely voting minority

- Uncontrolled fire is promoted
- Food and habitats for many chosen species is resisted

Private economies are pushed downhill

(While pushing taxpayer support uphill)

Current nuclear deal puts-off things into the future

(While ignoring unknown side deals and reality)

Many innocents

(And others trying to follow laws)

(Put in place by those with the power and minority vote)

Are penalized

Strengths Are Downplayed

Like atom bomb which ended world war II

And

Put in place by Reagan which prevented world war III

I have written a book that is coming true

(Regarding many things and in many ways)

My answer to my question

“Are humans that dumb?”

is

“Yes”

Subject: Preserved old-growth areas

Living a life in rural areas and with fifty plus years as a field forester, I have seen many undisturbed old-growth areas, and I have seen up close and personal the north and south sides of the Headwaters Forest and a lot of old-growth left in Headwaters Forest. My life's experiences have given me the knowledge to understand the few benefits, and economic, uncontrolled fire, and other losses many species and humans experience in preserved areas paid for by taxpayers.

I again ask who has seen the Headwaters core old-growth area which BLM lets very, very, very few see? I simply want to know if those who have visited the core old-growth headwaters area understand what has happened and is happening in this preserved area.

In my mind, I already have a picture of what has happened, and I know a lot about what is happening; but, as a big believer in site specific review, I am looking for someone who can help me better understand that what is happening now is a good thing?

Real World Truths Are Not Always Fair and Balanced

Charles L. Ciano

Subject: Most humans are dumb and the fat is in the fire.

When you give history and use of older, experienced input a serious full look, you find humans have done a lot of damage to species and other humans, but along the way, there is no denying things have been made better for species and humans. While protectionism has merit by helping learn what might be, preservation is never forever, and what happens in our little corner of the world means little in what happens in world politics. I am a believer that the good as determined by humans has always resulted from using historical and experienced field peer review of science and site specific facts with a little logic and common sense thrown-in.

I and I assume many others have seen how words are cheap and easy, and a lot of good has resulted from having a sword sharper than the bad guys (World war II showed us the atomic bomb in the hands of the good guys saved a lot of human lives, Reagan showing strength stopped World war III) and from full and proper use of natural resources (creation of more food for chosen species, properly protected and enhanced habitats).

Can humans say a stalemate or losing Korean and Vietnam wars has resulted in better things? While humans are working to improve proper full use of natural resources, can you say protectionism is not hurting and killing many species and humans? Can you say uncontrolled fire is not increasing? Can you say economies especially rural economies are getting better? Can you say with 80% of the wood used in California coming from out of California while all California's wood needs are grown on private lands without any wood grown on national Forest and other Public Trust lands is a good thing for California? While everyone is in violation of some law in some way, somewhere, will more unjustified regulation be good for the working taxpaying, family, low to low middle income, and producing person? Is letting a weaker IRAN and those who think the same eventually get stronger with a nuclear bomb a good thing?

Having unsuccessfully tried to get back into a working person's world (grocery store helper, pet store helper, U.S. Post office, access to regulatory changes), I have found only those with hi-tech electronic access or who can spend money on gas, travel expenses, or needed help can get into this world. This leads me to believe a shrinking voting minority control how we live, think, and vote. ? I see Ted Cruz and Thump on the same and right track telling about truthful realities. I see many bad things delayed into the future. Isn't solving problems now a better choice? Are humans that dumb?

Real World Truths Are Not Always Fair and Balanced

We could have much, much, much more, and there is a better way

Subject: Trying to help rural way of life last longer

Actions by those controlling rural areas and Humboldt County (Farm Bureau, licensed foresters, Grange, politicians, media, etc.) which depend on a timber industry and private ownership (especially in California) do not seem to care rural economies (Humboldt County economy estimated to be half supported by taxpayer dollars and by an off-the-books and an out of control marijuana industry), are going downhill (folks leaving, school enrollment going down, tax revenues going to pot, etc.). Anyone disagree?

Full and proper use of natural resources (especially timber) is resisted (regulation by many, protectionists, preservationists, etc.), potential for uncontrolled fire is increased, and many species (spotted owls, fish, etc.) are hurt and killed.

Having real world experience, I see how hi-tech electronic communication and information is a wonderful thing, but it is also interesting how clever use is routinely letting a minority control a voting minority which makes decisions that affect the majority (public, many currently unable to use hi-tech communication, etc.).

With many on all sides wanting majority control, it is interesting how a shrinking minority controls an inexperienced and unknowledgeable voting minority in making decisions that affect the majority.

Those in control (minority voters, regulators, and those who have it made) resist putting in place ways to promote full and proper use of natural resources. Those with real world experience know unfactual, theorized, speculated, protectionist, illogical, uncommon sensical regulations, conservation easements, carbon credit arrangements, preservation, and legalese (with the help of a Fourth Branch of Government) gives the gold ring to a few.

Many folks (working, taxpaying, family, producing) especially in rural private sectors are being taken for a bad ride.

My remaining time on this planet has been the pits as an older and wiser person trying to expose others to some real world truths (laughed at, not taken seriously, etc.). If you do understand my understanding of what I see coming, give me a call some time.
