

Rainwater Irrigation and Storage Calculations

PLN: 13374,13337,13367,13336,13356,&13365

Over view:

Water for cannabis irrigation and the operations buildings will be supplied entirely by an integrated rainwater catchment system. The system will utilize three rainwater catch ponds and 7 separate tank locations to distribute rainwater to PLN: 13374,13337,13367,13336,13356,&13365 .

The combination of rainwater sources will provide over 2,526,197 gallons of water in very low rainfall years, plenty to meet the 1,904,202 gallon projected irrigation and domestic need, including consideration for evaporation from the pond. The breakdown of water catchment, water use, and water storage numbers are provided below.

Although the 50 year average for annual rainfall is 66.68", the rainfall volumes below are calculated using the average precipitation value in the ten lowest rain years (40.105").

*See rainfall data Page 4

*See water distribution system Page 3

Calculations

Volumes by source:

Pond #1 APN 218-051-008 PLN: 13374 potential volume of water availability calculated using low average rainfall. $74,479\text{sf} \times 40.105" \times 0.6234 = 1,862,084\text{gallons}$

Pond #2 APN 218-190-001 PLN: 13365 potential volume of water availability calculated using low average rainfall. $15,981\text{sf} \times 40.105" \times 0.6234 = 399,548\text{gallons}$

Pond #3 APN 218-071-003 PLN: 13336 potential volume of water availability calculated using low average rainfall. $10,582\text{sf} \times 40.105" \times 0.6234 = 264,565\text{gallons}$

*Note: although the 50 average for annual rainfall is 66.68", the rainfall volume above is calculated using the average precipitation value for the ten lowest rain years in the available data set (40.105")

Total water volume available in low rainfall years: 2,526,197gallons

Estimated water use:

PLN#: 13374=276,840

PLN#: 13337=386,812

PLN#: 13367=140,000

PLN#: 13336=456,200

PLN#: 13365=530,300

PLN#: 13356=114,050

=1,904,202

Evaporation Loss:

Willow creek 1 NW
Monthly Pan evaporation (inches)

Period of record	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Total
WILLOW CREEK 1 NW 1968-2005	0.58	1.35	1.81	2.74	4.73	6.50	7.53	6.05	3.79	1.94	0.75	0.92	38.69

*multiply by .7 correction factor for offset heat exchange

Pond surface area (Median): (P#1- 4,356)+(P#2-1,525)+(P#3-12,851) = 18,731

Class A Pan seasonal evaporation rate-37 year average: 38.69'

Corrected Pan evaporation: $38.69 \times .7 = 27.083' / 12 = 2.257\text{ft}$

median surface area x corrected pan evaporation rate

$18,731\text{sf} \times 2.257\text{ft} = 42,275.867\text{cf}$

x7.48052gallon conversion

= 316,245gallons

Annual water need: (=1,904,202 use) + (316,245 evap-loss) = Gallon 2,220,447

Total water volume available in low rainfall years: 2,526,197gallons
