ATTACHMENT 10

Final Environmental Impact Report (provided in the staff report for the March 19, 2018 meeting)

A corrected Mitigation, Monitoring and Reporting Program is provided below.

1

,

MITIGATION MONITORING AND REPORTING PROGRAM

CEQA and the State CEQA Guidelines (PRC Section 21081.6 and State CEQA Guidelines Sections 15091[d] and 15097) require public agencies "to adopt a reporting and monitoring program for changes to the project which it has adopted or made a condition of project approval to mitigate or avoid significant effects on the environment." A Mitigation Monitoring and Reporting Program (MMRP) is required for the proposed project because the EIR identifies potential significant adverse impacts related to the project implementation, and mitigation measure have been identified to reduce those impacts. Adoption of the MMRP would occur along with approval of the proposed amendments to Humboldt County Code regulating commercial cannabis activities (proposed ordinance or project).

Purpose of Mitigation Monitoring and Reporting Program

This MMRP has been prepared to ensure that all required mitigation measures are implemented and completed in a satisfactory manner prior to implementation of the proposed ordinance. The attached table has been prepared to assist the responsible parties in implementing the mitigation measures. The table identifies the impact, mitigation measures (as amended through the Final EIR), monitoring responsibility, mitigation timing, and provides space to confirm implementation of the mitigation measures. The numbering of mitigation measures follows the numbering sequence found in the EIR. Mitigation measures that are referenced more than once in the DEIR are not duplicated in the MMRP table.

Roles and Responsibilities

Unless otherwise specified herein, the County is responsible for taking all actions necessary to implement the mitigation measures under its jurisdiction according to the specifications provided for each measure and for demonstrating that the action has been successfully completed.

Inquiries should be directed to:

Humboldt County Planning and Building Department Attention: Steve Lazar, Senior Planner, 3015 H Street, Eureka, CA 95501 Telephone: (707) 268-3741 Fax: (707) 268-3792 Email: slazar@co.humboldt.ca.us

The location of this information is:

Humboldt County Planning and Building Department at 3015 H Street, Eureka, CA 95501

The County is responsible for overall administration of the MMRP and for verifying that County staff members have completed the necessary actions for each measure (i.e., appropriate amendments to the proposed ordinance).

Reporting

The County shall document and describing the compliance of the activity with the required mitigation measures either within the attached table or a separate monitoring documentation as part of processing applications under the proposed ordinance.

Mitigation Monitoring and Reporting Program Table

The categories identified in the attached MMRP table are described below.

- Impact This column provides the verbatim text of the identified impact.
- Mitigation Measure This column provides the verbatim text of the adopted mitigation measure
- Implementation Responsibility This column identifies the party responsible for implementing the mitigation measure.
- Timing This column identifies the time frame in which the mitigation will be implemented.
- Verification This column is to be dated and signed by the person (either project manager or his/her designee) responsible for verifying compliance with the requirements of the mitigation measure.

Impact	Mitigation Measure	Implementation Responsibility	Timing	Venfication
3.3 Air Quality/Greenhouse Gas I	Emissions	<u> </u>		<u> </u>
Impact 3.3-4: Exposure of people to objectionable odors.	 Mitigation Measure 3.3-4: Prohibit burning of cannabis and other vegetative material The County shall amend the proposed ordinance to reflect the following requirements: The burning of excess plant material associated with the cultivation and processing of commercial cannabis is prohibited. 	Humboldt County	This mitigation measure will be incorporated into the ordinance and will be applied to commercial cannabis operations that receive permits.	
3.3 Biological Resources				<u> </u>
	 Mitigation Measure 3.4-1a: Pre-approval biological reconnaissance surveys. The following shall be included as performance standards in the proposed ordinance for the protection of special-status wildlife species and habitat from new development related to cannabis activities. Prior to approval of any application for commercial cannabis operations, a biological reconnaissance survey shall be conducted within the proposed development area by a qualified biologist. The qualified biologist shall assess the habitat suitability of the proposed development area for all 35 special-status wildlife species identified as having potential to occur in the County consistent with General Requirement and Prohibition 10 of the Attachment A of the State Water Board Policy. The biologist shall provide a letter report to the project applicant and the County with evidence to support a conclusion as to whether special-status species and sensitive habitats are present or are likely to occur within the proposed development area. If special-status species or sensitive habitats are present, the appropriate mitigation measures from this EIR shall be identified. The County shall require implementation of the mitigation measures as part of the application approval. 	Humboldt County	These mitigation measures will be incorporated into the performance standards and application requirements of the proposed ordinance.	

B.0745 ---.. .. .

•

1

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	cannabis activities.			
	If special-status amphibians are detected during the initial biological reconnaissance survey (see Mitigation 3.4-1a), preconstruction surveys, or are determined to be likely to occur, consultation with CDFW shall be initiated to determine whether additional measures, such as project design modifications, relocation of the site, relocation of individual animals, or installation of exclusionary fencing, will be necessary and appropriate.			
	Regardless of detection during the initial biological reconnaissance survey, if suitable habitat for special-status amphibians is present within the proposed development area, a qualified biologist familiar with the life cycle of foothill yellow-legged frog, northern red-legged frog, Pacific tailed-frog, red-bellied newt, and southern torrent salamander shall conduct preconstruction surveys of proposed new development activities 48 hours prior to such development activities. Preconstruction surveys for special-status amphibian species shall be conducted throughout the proposed construction area and a 400-foot buffer around the proposed development area. Surveys shall consist of "walk and turn" surveys of areas beneath surface objects (e.g., rocks, leaf litter, moss mats, coarse woody debris) for newts and salamanders, and visual searches for frogs. Preconstruction surveys shall be conducted within the appropriate season to maximize potential for observation for each species, and appropriate surveys will be conducted for the applicable life stages (i.e., eggs, larvae, adults).			
	If special-status amphibians are not detected during the preconstruction survey, then further mitigation is not required.			
	Mitigation Measure 3.4-1c: Western pond turtle preconstruction surveys and relocation. The following shall be included as a performance standard in the proposed ordinance for the protection of western pond turtle from new development related to cannabis activities.	e e e		
	If pond turtles are detected during the initial biological reconnaissance survey (see Mitigation 3.4-1a), preconstruction surveys, or are determined to be likely to occur, consultation with CDFW shall be initiated to determine whether mitigation measures, such as project design modifications, relocation of the site, relocation of individual animals, or installation of exclusionary fencing, will be necessary			1 4

Impact	Mitigation Measure	Implementation Responsibility	Timing	Ventication
	 and appropriate. Regardless of detection during the initial biological reconnaissance survey, if suitable aquatic habitat for western pond turtle is present within the proposed development area, a qualified biologist familiar with the life history of western pond turtle shall conduct preconstruction surveys of proposed new development activities within 200 feet of any SMA or Other Wet Area 24 hours prior to new development activities. 			
	If pond turtles are not detected during the preconstruction survey, then further mitigation is not required.			
	Mitigation Measure 3.4-1d: Nesting raptor preconstruction survey and establishment of protective buffers. The following shall be included as performance standards in the proposed ordinance for the protection of nesting raptors from new development related to cannabis activities.			
	 To minimize the potential for loss of nesting raptors, tree removal activities shall only occur during the nonbreeding season (September 1-January 31. Prior to removal of any trees, or ground-disturbing activities between February 1 and August 31, a qualified biologist shall conduct preconstruction surveys for nesting raptors, and shall identify active nests within 500 feet of the proposed development area. The surveys shall be conducted between February 1 and August 31. 			
	Impacts to nesting raptors, including direct impacts and indirect impacts (e.g., noise, presence of construction crews) shall be avoided by establishing appropriate buffers around active nest sites identified during preconstruction raptor surveys. The buffer areas shall be protected with construction fencing, and no activity shall occur within the buffer areas until a qualified biologist has determined, in coordination with CDFW, that the young have fledged, the nest is no longer active, or reducing the buffer would not likely result in nest abandonment. CDFW guidelines recommend implementation of a 500-foot buffer for raptors, but the size of the buffer may be adjusted if a qualified biologist and the applicant, in consultation with CDFW, determine that such an adjustment would not be likely to adversely affect the nest. Monitoring of the			

Impact	Mitigation Measure	Implementation Responsibility	Timing	¹ Verification
	nest by a qualified biologist during and after construction activities will be required if the activity has potential to adversely affect the nest.			
	Removal of bald and golden eagle nests are prohibited regardless of the occupancy status under the federal Bald and Golden Eagle Protection Act. If bald or golden eagle nests are found during pre-construction surveys, then the nest tree shall not be removed.			, ,
	Trees shall not be removed during the breeding season for nesting raptors unless a survey by a qualified biologist verifies that there is not an active nest in the tree.			
	Mitigation Measure 3.4-1e: Northern spotted owl preconstruction habitat suitability surveys and determination of presence or absence. The following shall be included as performance standards in the proposed ordinance for the protection of northern spotted owl from permitted cannabis activities.			
	 To avoid the potential for loss of northern spotted owl and their nests, or loss or fragmentation of occupied or suitable habitat for northern spotted owl, removal of old growth habitat shall be prohibited, as outlined in Mitigation Measure 3.4-3, Sensitive natural communities, riparian habitat, old growth habitat, and wetland vegetation. 			
	If the area of proposed new development activities is within suitable habitat for northern spotted owl (e.g., coniferous forest), and is within 1.3 miles (average species home range) of a known occurrence of northern spotted owl, as determined by a qualified biologist, the following measures shall be followed.			
	Prior to removal of any trees, or ground-disturbing activities adjacent or within suitable nesting, roosting, or foraging habitat (e.g. forest clearings) for spotted owl, a qualified biologist, familiar with the life history of the northern spotted owl, shall conduct preconstruction surveys for nests within a 1.3-mile buffer around the site as described in <i>Protocol for Surveying Proposed Management Activities that May Impact Northern Spotted Owls</i> (USFWS 2012). Surveys shall take place between March 1 and August 31. Three complete surveys over the course of 2 years must be completed to determine presence or absence of northern spotted owl.			
	 If northern spotted owls are determined to be absent 1,3 miles from the site, 			

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	then further mitigation is not required.			
	✓ If northern spotted owls are determined to be present within 1.3 miles of the site, then it is presumed that habitat removal could cause harm to northern spotted owl populations in the area, and could result in direct take of northern spotted owls. If northern spotted owls are determined to be present within 1.3 miles of the site, proposed cultivation activities will not be permitted consistent with the General Requirement and Prohibition 4 of the Attachment A of the State Water Board Policy.			
	✓ For pre-existing cultivation sites that submitted for permitting prior to December 31, 2019 within 0.7 miles of a known northern spotted owl activity center, a qualified biologist, familiar with the life history of the northern spotted owl, shall conduct a disturbance and habitat modification assessment to determine the presence of the species and whether the cultivation site can operate or have its operation modified to avoid take of the species. If it is determined that take of the species could occur, the cultivation site will be required to participate in the Retirement, Remediation, and Relocation provisions of the proposed ordinance to relocate the cannabis cultivation to outside of the northern spotted owl activity area. Pre-existing cultivation sites that submit for permitting after December 31, 2019 will be subject the new development provisions of this mitigation measure.			
	Mitigation Measure 3.4-1f: Special-status nesting bird surveys and establishment of protective buffers. The following shall be included as performance standards in the proposed ordinance for the protection of bank swallow, little willow flycatcher, tricolored blackbird, and western yellow-billed cuckoo from new development related to cannabis activities. This will apply to any commercial cannabis activity that would result in the disturbance or loss of riparian, riverine, mudflat, or grassland habitats.			
	To minimize the potential for disturbance or loss of bank swallow, little willow flycatcher, tricolored blackbird, western snowy plover, western yellow-billed cuckoo, or other bird nests, vegetation removal activities shall only occur during the nonbreeding season (September 1-January 31). Alteration of or disturbance to suitable river bank habitat (i.e., for bank swallow nests) and mudiflat habitat (i.e., for western snowy plover) is prohibited because of limited habitat availability for this species.	-		

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	and August 31, a qualified biologist shall conduct preconstruction surveys for nests on any structure or vegetation slated for removal, as well as for potential tricolored blackbird nesting habitat. The surveys shall be conducted no more than 14 days before construction commences. If no active nests or bank swallo colonies are found during focused surveys, no further action under this measur will be required. If active nests are located during the preconstruction surveys, the biologist shall notify the Planning Director and CDFW. If deemed necessary by the Planning Director in consultation with CDFW, modifications to the project design to avoid removal of occupied habitat while still achieving project objectives may be required. If the Planning Director determines in consultation with CDFW that avoidance is not feasible or conflicts with project objectives, construction shall be prohibited within a minimum of 100 feet of the nest to avoid disturbance until the nest or colony is no longer active.	w e	-	
	Mitigation Measure 3.4-1g: Marbled murrelet preconstruction habita suitability surveys and establishment of protective buffers. The following shall be included as performance standards in the proposed ordinance for the protection of marbled murrelet from new development related to cannabis activities			
	To avoid the potential for loss of or disturbance to marbled murrelet nests and habitat, removal of old growth habitat shall be prohibited, as outlined in Mitigation Measure 3.4-3, Sensitive natural communities, riparian habitat, old growth habitat, and wetland vegetation.			
	Prior to removal of any trees, or ground-disturbing activities adjacent or within suitable habitat for marbled murrelet between April 15 and August 5, a qualifier biologist, familiar with the life history of the marbled murrelet, shall conduct preconstruction surveys for nests within a 0.25-mile buffer around the site as described in Methods for Surveying Marbled Murrelets in Forests: A Revised Protocol for Land Management and Research (Evans Mack et. al 2003).			
	If marbled murrelets are determined to be absent from the site, then no further mitigation is required.			
	If marbled murrelets are determined to be present within the site, a 0.25-mile buffer will be established around occupied nest sites. No project activity may occur within the 0.25-mile buffer areas until the end of marbled murrelet breeding season (August 6).			

Impact	Mitigation Measure	Implementation Responsibility	Timing -	Verification
	Mitigation Measure 3.4-1h: Noise reduction. The ordinance requires generators and other cannabis operations not to increase existing ambient noise levels at the property line of the site beyond 3 dB. In addition, the noise standards shall include the following standards to protect wildlife (USFWS 2006).	I		
	 Project-generated sound must not exceed ambient nesting conditions by 20-25 decibels. 			-
	Project-generated sound, when added to existing ambient conditions, must not exceed 90 decibels.			
	Time of day adjustment: Marbled murrelet and northern spotted owl are most active during dawn and dusk. Within approximately 2 hours of sunrise and sunset, ambient sound levels are lower than during the middle of the day (by approximately 5-10 decibels). This will be accounted for when determining impacts of project-generated sound.			
	Mitigation Measure 3.4-11: American badger preconstruction survey and establishment of protective buffers. The following shall be included as performance standards in the proposed ordinance for the protection of the American badger from new development related to cannabis activities.			
	Prior to the commencement of construction activities, a qualified wildlife biologist shall conduct surveys of the suitable grassland or agricultural habitats slated for conversion within the site to identify any American badger burrows/dens. These surveys shall be conducted not more than 30 days prior to the start of construction. If occupied burrows are not found, further mitigation shall not be required. If occupied burrows are found, impacts to active badger dens shall be avoided by establishing exclusion zones around all active badger dens, within which construction related activities shall be prohibited until denning activities are complete or the den is abandoned. A qualified biologist shall monitor each den once per week to track the status of the den and to determine when a den area has been cleared for construction.			
	Mitigation Measure 3.4-1j: Fisher and Humboldt marten preconstruction survey and preservation of active den sites. The following shall be included as performance standards in the proposed ordinance for			

~

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	the protection of the fisher and Humboldt marten from new development related to cannabis activities.			
	To minimize the potential for loss of or disturbance to fisher and Humboldt marten habitat and dens, removal of old growth habitat shall be prohibited, as outlined in Mitigation Measure 3.4-3, Sensitive natural communities, riparian habitat, old growth habitat, and wetland vegetation.			
	Prior to commencement of from new development related to cannabis activities occurring within the fisher and Humboldt marten denning season (March 1 to July 31), including tree removal (non-old growth), a qualified wildlife biologist will conduct preconstruction surveys of all suitable habitat within the site, and will identify sightings of individual fishers or martens, as well as potential dens.			
	If individuals or potential or occupied dens are not found, further mitigation will not be required.			
	✓ If fisher or Humboldt marten are identified or if potential dens of these species are located, an appropriate method shall be used by a qualified wildlife biologist to confirm whether a fisher or marten is occupying the den. This may involve use of remote field cameras, track plates, or hair snares. Other devices such as fiber optic scope may be utilized to determine occupancy. If no fisher or marten occupies the potential den, the entrance will be temporarily blocked so that no other animals occupy the area during the construction period but only after it has been fully inspected. The blockage will be removed once construction activities have been completed.	- '		
	✓ If a den is found to be occupied by a fisher or marten, a no-disturbance buffer will be placed around the occupied den location. The no-disturbance buffer will include the den tree (or other structure) plus a suitable buffer as determined by the biologist in coordination with USFWS and CDFW. Construction activities in the no-disturbance buffer will be avoided until the nest is unoccupied as determined by a qualified wildlife biologist in coordination with USFWS and CDFW.		÷	1
	Mitigation Measure 3.4-1k: Preconstruction bat survey and exclusion. The following shall be included as performance standards in the proposed ordinance for the protection of the pallid bat and Townsend's big-eared bat from new development related to cannabis activities.			
	Before commencing any new development related to cannabis activities, a			

,

.

.

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	qualified biologist shall conduct surveys for roosting bats. If evidence of bat use is observed, the species and number of bats using the roost shall be determined: Bat detectors may be used to supplement survey efforts. If no evidence of bat roosts is found, then no further study will be required.			1
ι	If pallid bats or Townsend's big-eared bats are found in the surveys, a mitigation program addressing mitigation for the specific occurrence shall be submitted to the Planning Director and CDFW by a qualified biologist subject to the review and approval of the Planning Director in consultation with CDFW. Implementation of the mitigation plan shall be a condition of project approval. At a minimum, the mitigation plan shall establish a 400-foot buffer area around the nest during hibernation or while females in maternity colonies are nursing young.			
	Mitigation Measure 3.4-11: Preconstruction vole survey and relocation. The following shall be included as performance standards in the proposed ordinance for the protection of the Sonoma tree vole and white-footed vole from new development related to cannabis activities.			
	✓ To minimize the potential for loss of or disturbance to vole habitat and nests, removal of old growth habitat shall be prohibited, as outlined in Mitigation Measure 3.4-3 Sensitive natural communities, riparian habitat, old growth habitat, and wetland vegetation.			
	Before commencing any tree or other vegetation removal activities, or ground- disturbance, a qualified biologist shall conduct surveys for vole nests (e.g., nest searching within trees on the site, and confirming that nests belong to voles rather than squirrels or birds). If no evidence of vole nests is found, then no further study shall be required. A report summarizing the results of the surveys shall be prepared and submitted to the Planning Director and shall be subject to his review and approval in consultation with CDFW.			
	If occupied trees or nests are identified within 100 feet of the site, the biologist shall determine whether project development activities will adversely affect the voles, based on factors such as noise level of development activities, or line of sight between the tree and the disturbance source. If it is determined that development activities would not affect the voles, then development can proceed without protective measures.			

•

217

٠

(

impact	Mitigation Measure	Implementation Responsibility	' Timing	Venification
	If the biologist determines that development activities would likely disturb voles, the proposed area of disturbance shall be relocated a minimum of 200 feet from the nest.			
Impact 3.4-2: Disturbance to or loss of special-status fisheries.	Mitigation Measure 3.4-2: Implement Mitigation Measure 3.8-5.	See Impact 3.8-5	See Impact 3.8-5	
Impact 3.4-3: Disturbance to or loss of special-status plant species and habitat.	 Mitigation Measure 3.4-3a: Special-status plants. The following shall be included as performance standards in the proposed ordinance for the protection of special-status plant species from new development related to cannabis activities. Prior to commencement of new development related to cannabis activities and during the blooming period for the special-status plant species with potential to occur in the site, a qualified botanist will conduct protocol-level surveys for special-status plants in all proposed disturbance areas following survey methods from CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFW 2009). If special-status plants are not found, the botanist will document the findings in a letter report to USFWS, CDFW, and the applicant and no further mitigation will be required. If special-status plant species are found, a qualified biologist shall consult with CDFW to designate a no-disturbance buffer that will be reflected in the application to the County consistent with General Requirement and Prohibition 10 of the Attachment A of the State Water Board Policy. If the special-status plant species cannot be avoided, the application will be denied. Mitigation 3.4-3b: Invasive plant species. The following shall be included as performance standards in the proposed ordinance to avoid the introduction or spread of plants classified as invasive plant species by the California Invasive Plant Council. 	Humboldt County	These mitigation measures will be incorporated into the performance standards and application requirements of the proposed ordinance.	
	The application will include identification of invasive plant species that occur on the site and where they are located. The application will identify specific measures to be employed for the removal invasive species and on-site management practices. As part of the County's annual inspection areas where			

٠

.

Impact	on Monitoring and Reporting Program – Proposed Amendments to Humboldt Cou Mitigation Measure	Implementation Responsibility	Timing ,	Verification
	invasive plant species were removed will be checked to verify removal. Corrective actions may be required as part of the annual permit renewal if invasive species remain or have returned.			
	▲ All invasive plant species shall be removed from the site using measures appropriate to the species. For example, species that cannot easily re-root, re- sprout, or disperse seeds may be left on site in a debris pile. Species that re- sprout readily (e.g., English ivy) or disperse seeds (e.g., Pampas grass) should be hauled off-site and disposed of appropriately at a landfill site.			, ,
	Heavy equipment and other machinery shall be inspected for the presence of invasive species prior to on-site use, and shall be cleaned prior to entering the site, to reduce the risk of introducing invasive plant species.

Impact	Mitigation Measure	Implementation Responsibility	Timing	Venification
Impact 3.4-4: Disturbance to or loss of riparian habitat, old growth habitat, or other sensitive natural communities.	Mitigation 3.4-4: Sensitive natural communities, riparian habitat, and wetland vegetation. The following shall be included as performance standards in the proposed ordinance for the protection of sensitive natural communities and riparian habitat.	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of	
	▲ For projects that could disturb sensitive natural communities or riparian habitat, the application shall include a report prepared by a qualified biologist that surveys the site for these sensitive resources, including riparian habitat associated with aquatic features; old growth Sitka spruce, Douglas fir, and redwood forests; coastal oak woodlands; special-status fish stream habitats; marsh habitats; and northern foredune grassland near Humboldt Bay and the Mattole River; coastal terrace prairie within Table Bluff Ecological Reserve; and any designated environmentally sensitive habitat area (ESHA).		the proposed ordinance.	
- -	▲ The report shall include requirements that before development activities commence, all sensitive areas identified above shall be flagged or fenced with brightly visible construction flagging and/or fencing under the direction of the qualified biologist to require that grading, excavation, other ground-disturbing activities, and vegetation removal will not occur within these areas. Foot traffic by construction personnel shall also be limited in these areas to prevent the introduction of invasive or weedy species. Periodic inspections during construction shall be conducted by the monitoring biologist to maintain the integrity of exclusion fencing/flagging throughout the period of construction involving ground disturbance.			
	✓ If the report documents that site development would affect the bed, bank, channel, or associated riparian habitat subject to CDFW Jurisdiction under Fish and Game Code Section 1602, a Streambed Alteration Notification shall be submitted to CDFW, pursuant to Section 1600 et seq. of the California Fish and Game Code. If proposed activities are determined to be subject to CDFW jurisdiction, the project proponent shall abide by the conditions of any executed agreement prior to the issuance of a grading permit by Humboldt County.	-		
	Subject to the review and approval of the Planning Director in consultation with CDFW applicants shall compensate for permanent loss of riparian habitat at a minimum of a 2:1 ratio through contributions to a CDFW approved wetland mitigation bank or through the development and implementation of a Compensatory Stream and Riparian Mitigation and Monitoring Plan for creating			

220

impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	or restoring in-kind habitat in the surrounding area (such as the proposed ordinance site reconfiguration criteria for existing cultivation sites). If mitigation credits are not available, stream and riparian habitat compensation shall include establishment of riparian vegetation on currently unvegetated bank portions of streams affected by the project and enhancement of existing riparian habitat through removal of nonnative species, where appropriate, and planting additional native riparian plants to increase cover, continuity, and width of the existing riparian corridor along streams in the site and surrounding areas. Construction activities and compensatory mitigation shall be conducted in accordance with the terms of a streambed alteration agreement as required under Section 1602 of the Fish and Game Code as well as the State Water Board Cannabis Cultivation Policy.			
	The Compensatory Stream and Riparian Mitigation and Monitoring Plan shall include the following:			
	 identification of compensatory mitigation sites and criteria for selecting these mitigation sites; 			
	 in kind reference habitats for comparison with compensatory riparian habitats (using performance and success criteria) to document success; 	u U		
	monitoring protocol, including schedule and annual report requirements (Compensatory habitat will be monitored for a minimum of 5 years from completion of mitigation, or human intervention [including recontouring and grading], or until the success criteria identified in the approved mitigation plan have been met, whichever is longer.);			
	ecological performance standards, based on the best available science and including specifications for native riparian plant densities, species composition, amount of dead woody vegetation gaps and bare ground, and survivorship; at a minimum, compensatory mitigation planting sites must achieve 80 percent survival of planted riparian trees and shrubs by the end of the five-year maintenance and monitoring period or dead and dying trees will be replaced and monitoring continued until 80 percent survivorship is achieved;			
	 corrective measures if performance standards are not met; 			
	responsible parties for monitoring and preparing reports; and			
	responsible parties for receiving and reviewing reports and for verifying success			

impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	or prescribing implementation or corrective actions.			<u> </u>
Impact 3.4-5: Disturbance to or loss of waters of the United States.	 Mitigation 3.4-5: Waters of the United States. The following shall be included as performance standards in the proposed ordinance for the protection of waters of the United States from new development related to cannabis activities. The application shall include a report prepared by a qualified biologist that surveys the site for sensitive resources, including wetlands, streams, and rivers. Wetlands and other waters of the United States are of special concern to resource agencies and are afforded specific consideration, based on Section 404 of the Clean Water Act and other applicable regulations. If the report documents waters of the United States to be present, a delineation of waters of the United States, including wetlands that would be affected by the project, shall be prepared by a qualified biologist through the formal Section 404 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.	<u> </u>
-	 wetland delineation process. The delineation shall be submitted to and verified by USACE. If, based on the verified delineation, it is determined that fill of waters of the United States would result from implementation of the project, authorization for such fill will be secured from USACE through the Section 404 permitting process. 			
	Any waters of the United States that would be affected by site development shall be replaced or restored on a "no-net-loss" basis in accordance with USACE mitigation guidelines (or the applicable USACE guidelines in place at the time of construction). In association with the Section 404 permit (if applicable) and prior to the issuance of any grading permit, Section 401 Water Quality Certification from the RWQCB will be obtained.	-		
	USACE may not issue a Section 404 permit for activities associated with cannabis cultivation. If a Section 404 permit cannot be obtained, then the applicant shall modify the proposed project to avoid any wetlands or other waters of the United States by providing a buffer of at least 50 feet around these features.			
mpact 3.4-6: Interference with resident or migratory wildlife corridors or native	Mitigation 3.4-6a: Implement Mitigation Measure 3.4-5: Waters of the United States. Mitigation 3.4-6b: Retention of fisher and Humboldt marten habitat	Humboldt County	This mitigation measure will be incorporated into the performance standards and	

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
wildlife nursery sites.	features		application requirements of	
	The following shall be included as performance standards in the proposed ordinance for the protection of the habitat for fisher and Humboldt marten.		the proposed ordinance.	
	To minimize the potential for loss of or disturbance to fisher and Humboldt marten habitat, removal of old growth habitat shall be prohibited, as outlined in Mitigation Measure 3.4-3, Sensitive natural communities, riparian habitat, and wetland vegetation.			
	Habitat features within non-old growth habitat, such as large trees, large snags, coarse woody debris, and understory vegetation (e.g., shrubs) shall be retained within the site to the extent feasible, to maintain connectivity of fisher and marten habitat.			
3.5 Cultural Resources				
Impact 3.5-1: Change in the significance of a historic resource.	 Mitigation 3.5-1: Protection of historic resources. The following shall be included as performance standards in the proposed ordinance for the protection of historic resources. Applicants shall identify and evaluate all historic-age (over 45-years in age) buildings and structures that are proposed to be removed and modified as part of cannabis operations. This will include preparation of an historic structure report and evaluation of resources to determine their eligibility for recognition under State, federal, or County Local Official Register of Historic Resources 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.	
	criteria. The evaluation shall be prepared by an architectural historic Resources criteria. The evaluation shall be prepared by an architectural historian, or historical architect meeting the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation, Professional Qualification Standards. The evaluation shall comply with CEQA Guidelines Section 15064.5(b), and, if federal funding or permits are required, with Section 106 of the National Historic Preservation Act (NHPA) of 1966 (16 U.S.C. § 470 et seq.).			
	If resources eligible for inclusion in the NRHP, CRHR, or Local Official Register of Historic Resources are identified, an assessment of impacts on these resources shall be included in the report, as well as detailed measures to avoid impacts. If avoidance of a significant architectural/built environment resource is not feasible, additional mitigation options include, but are not limited to, specific design plans for historic districts, or plans for alteration or adaptive re-use of a

~

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	historical resource that follows the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitation, Restoring, and Reconstructing Historic Buildings.			
mpact 3.5-2: Disturb unique archaeological resources.	 Mitigation 3.5-2: Avoid potential effects on unique archaeological resources. The following shall be included as performance standards in the proposed ordinance for the protection of archaeological resources. Applicants for projects that include any ground disturbance shall retain a qualified archaeologist to conduct archaeological surveys of the site. The applicant shall follow recommendations identified in the survey, which may include activities such as subsurface testing, designing, and implementing a Worker Environmental Awareness Program, construction monitoring by a qualified archaeologist, avoidance of sites, or preservation in place. All projects shall include the following requirements as a condition of approval: If evidence of any prehistoric or historic-era subsurface archaeological features or deposits are discovered during construction-related earth-moving activities (e.g., ceramic shard, trash scatters, lithic scatters), all ground-disturbing activity in the area of the discovery shall be halted and the County shall be notified immediately. A qualified archaeologist shall be rotained to assess the significance of the find. If the find is a prehistoric archeological site, the appropriate Native American group shall be notified. If the archaeologist determines that further information is needed to evaluate significance, a data recovery plan shall be prepared. If the find is determined to constitute either an historical resources ro a unique archaeological resource), the archaeologist shall work with the project applicant to avoid disturbance to the resources, and if complete avoidance is not feasible in light of project design, economics, logistics, and other factors, follow accepted professional standards in recording any find including submittal of the standard DPR Primary Record forms (Form DPR 523) and location information to NCIC. 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.

3.6 Geology and Solls			<u> </u>	<u>,</u>
Impact 3.6-5: Damage to or destruction of undiscovered paleontological resources.	Mitigation Measure 3.6-5 Protection of discovered paleontological resources. The following shall be included as performance standards in the proposed ordinance for the protection of paleontological resources.	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of	
	If a paleontological discovery is made during construction, the contractor shall immediately cease all work activities in the vicinity (within approximately 100 feet) of the discovery and shall immediately contact the County.		the proposed ordinance.	
	A qualified paleontologist shall be retained to observe all subsequent grading and excavation activities in the area of the find and shall salvage fossils as necessary. The paleontologist shall establish procedures for paleontological resource surveillance and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of fossils. If major paleontological resources are discovered that require temporarily halting or redirecting of grading, the paleontologist shall report such findings to the County. The paleontologist shall determine appropriate actions, in cooperation with the applicant and the County, that ensure proper exploration and/or salvage. Excavated finds shall first be offered to a State-designated repository such as the Museum of Paleontology, University of California, Berkeley, or the California Academy of Sciences. Otherwise, the finds shall be offered to the County for purposes of public education and interpretive displays. The paleontologist shall submit a follow-up report to the County that shall include the period of inspection, an analysis of the fossils found, and the present repository of fossils.		r.	
3.7 Hazards and Hazardous Ma	lerials			
mpact 3.7-2: Create potential human hazards from exposure	The following shall be included as performance standards in the proposed ordinance for	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of	
	Applications for new cannabis activities in commercial, business park, or industrial sites shall include a site assessment for the presence of potential hazardous materials, including an updated review of environmental risk databases. If this assessment indicates the presence or likely presence of		the proposed ordinance.	

Table 4-1 Mitigation Monitoring and Reporting Program - Proposed Amendments to Humboldt County Code Regulating Commercial Cannabis Activities

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	contamination, the applicant shall prepare a Phase I ESA in accordance with the American Society for Testing and Materials' E-1527-05 standard. For work requiring any demolition, the Phase I ESA shall make recommendations for any hazardous building materials survey work that shall be done. All recommendations included in a Phase I ESA prepared for a site shall be implemented. If a Phase I ESA indicates the presence or likely presence of contamination, the applicant shall prepare a Phase II ESA, and recommendations of the Phase II ESA shall be fully implemented prior to ground disturbance, which will be made a condition of approval for the project.			
	Mitigation Measure 3.7-2b: Prepare a Hazardous Materials Contingency Plan for Construction Activities The following shall be included as performance standards in the proposed ordinance for proposed development of commercial cannabis facilities on existing commercial, business park, or industrial sites:			
	Applications for new cannabis activities in commercial, business park, or industrial sites shall include f a hazardous materials contingency plan for review and approval by Humboldt County Division of Environmental Health. The plan shall describe the necessary actions that would be taken if evidence of contaminated soil or groundwater is encountered during construction. The contingency plan shall identify conditions that could indicate potential hazardous materials contamination, including soil discoloration, petroleum or chemical odors, and presence of USTs or buried building material. The plan shall include the provision that, if at any time during constructing the project, evidence of soil and/or groundwater contamination with hazardous material is encountered, the project applicant shall immediately halt construction and contact Humboldt County Division of Environmental Health. Work shall not recommence until the discovery has been assessed/treated appropriately (through such mechanisms as soil or groundwater sampling and remediation if potentially hazardous materials are detected above threshold levels) to the satisfaction of Humboldt County Division of Environmental Health, RWQCB, and DTSC (as applicable). The plan, and obligations to abide by and implement the plan, shall be incorporated			

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
3.8 Hydrology and Water Qual	ity	· · ·		
Impact 3.8-2: Operational water quality impacts.	Mitigation Measure 3.8-2: Minimum Size of Commercial Cultivation Activities The County shall amend the proposed ordinance to demonstrate compliance with the requirements of the State Water Board <i>Cannabis Cultivation Policy – Guidelines for</i> <i>Cannabis Cultivation</i> for all new commercial cannabis cultivation operations and not limited by a minimum cultivation area size.	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance. Annual inspections as part of permit renewals will verify continued compliance with this mitigation measure.	
impact 3.8-3: Groundwater supply impacts.	 Mitigation Measure 3.8-3: Annual groundwater monitoring and adaptive management. The following requirement will be included as an additional performance standard of the ordinance associated wells on small parcels: As part of the ordinance's annual inspection process, cultivation operators shall provide the County with groundwater monitoring data for on-site well facilities that documents well production and changes in groundwater levels during each month of the year. Should this monitoring data identify potential drawdown impacts to adjacent well(s) and indicate a connection to operation of the on-site wells, the cultivation operators, in conjunction with the County, shall develop adaptive management measures to allow for recovery of groundwater levels. Adaptive management measures may include forbearance (e.g., prohibition of groundwater extraction from the months of May to October), water conservation measures, reductions in on-site cannabis cultivation, alteration of the groundwater pumping schedule, or other measures determined appropriate. Adaptive management measures will remain in place until groundwater levels have recovered based on annual monitoring data provided to the County as part of subsequent annual inspections. 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance. Annual inspections and review of water records as part of permit renewals will verify continued compliance with this mitigation measure.	

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
Impact 3.8-4: Surface drainage impacts on on-site and offsite flooding.	 Mitigation Measure 3.8-4: Provision of drainage facilities to attenuate increases in drainage flows. The County shall include the following drainage requirement in the proposed ordinance application requirements: Applications will provide details of drainage facilities and stormwater management. This will include a drainage analysis of increases or alteration of on-site and off-site drainage flows from project facilities and identification of drainage swales, detention basins, or other facilities that will ensure that the project will retain pre-project drainage conditions. 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.	
mpact 3.8-5: Effects of liversion of surface water.	 Mitigation 3.8-5: Implement water diversion restrictions and monitoring and reporting requirements. The text of the proposed ordinance shall be modified to align with the State Water Resources Control Board Cannabis Cultivation Policy, which includes the following measures: The period of forbearance shall extend from April 1 through October 31 of each year, and be subject to the following additional restrictions: From November 1 through December 14 of each year, the surface water diversion period shall not begin until after seven consecutive days in which the surface waterbody's real-time Numeric Flow Requirement are met (see Appendix E). From December 15 through March 31 of each surface water diversion period, surface water diversion may occur on any day in which the surface waterbody's real-time daily average flow is greater than the Numeric Flow Requirement (see Appendix E). The State Water Board will monitor instream flows during the dry season and evaluate whether the number or location of groundwater diversions to determine whether imposition of a groundwater forbearance period or other measures. The State Water Board will notify cannabis cultivators the possibility of a groundwater forbearance period or other measures may be imposed to address the low flow condition. Cannabis cultivators shall bypass a minimum of 50 percent of the surface water flow past their point of diversion, as estimated based on visually observing 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance. Annual inspections and review of water records as part of permit renewals will verify continued compliance with this mitigation measure. The County will also notify water users (surface and groundwater) of any diversion restrictions based on water conditions and compliance with the State Water Board.

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	surface water flow at least daily.			
	Water diversion rates may be further restricted in a manner to provide minimum instream flow requirements needed for fish spawning, migration, and rearing, and the flows needed to maintain natural flow variability by the State Water Resources Control Board and/or California Department of Fish and Wildlife as part of state surface water diversion approvals in circumstances where multiple diversions existing along a single waterway.			•
	The cannabis cultivator shall not divert more than a maximum instantaneous diversion rate of 10 gallons per minute, unless authorized under an existing appropriative water right.			
	Cannabis cultivators shall plug, block, cap, disconnect, or remove diversion intake structures associated with cannabis cultivation activities during the source water forbearance period, unless the diversion intake is used for other beneficial uses.			1
	 Diverted water storage systems for cannabis cultivation shall be separated from storage systems used for other beneficial uses within a cultivation site. 			
	Cannabis cultivation shall inspect for leaks in mainlines, laterals, in-irrigation connections, sprinkler headers, and/or the ends of drop tape and feeder lines on a monthly basis. Any leaks discovered shall be immediately repaired upon detection. Worn, outdated, or inefficient irrigation system components and equipment shall be regulatory replaced to ensure a properly function, leak-free irrigation system at all times. Records of the date of inspections, repairs, and replacements shall be maintained.		1	
	Cannabis cultivators shall retain irrigation, inspection, and repair records at the cannabis cultivation site and shall make all records available for review by the Water Boards, CDFW, and the County upon request for a period of 10 years.			
.10 Noise		<u></u>		
mpact 3.10-1: Short-term, construction-related noise.	Mitigation Measure 3.10-1: Implement construction-noise reduction measures. The County shall include the following construction noise requirement for new commercial cannabis operations and modifications to existing commercial cannabis operations in the ordinance:	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance,	<u></u> *

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	All outdoor construction activity and use of heavy equipment outdoors shall take place between 7:00 a.m. and 6:00 p.m., Monday through Friday, and between 9:00 a.m. and 6:00 p.m. on Saturday and Sunday.			
3.12 Transportation and Circulati				
Impact 3.12-2: Long-term increase in traffic.	 Mitigation Measure 3.12-2: Proper design of highway access points. The proposed ordinance's roadway design standards shall be modified to include the following requirement: An evaluation of the existing or proposed new roadway access point to a state highway shall be provided. The evaluation will identify the required improvements to ensure proper function of the access based on anticipated traffic volumes. Improvements may include widening of the throat of the driveway to a minimum of 20 feet, provision of adequate sight distances, and other improvements determined necessary to comply with County and Caltrans standards. This improvement shall be in place prior to construction of the commercial cannabis operation. A copy of the approved Caltrans encroachment permit (if required) will be provided to the County. 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.	k 1 1
3.13 Utilities and Service Systems	· · · · · · · · · · · · · · · · · · ·			
Impact 3.13-1: Exceed wastewater treatment requirements or wastewater treatment capacity and related infrastructure.	Mitigation Measure 3.13-1a: Prepare a treatment program for all new indoor cultivation and non-cultivation activities. Applicants for new commercial indoor cultivation and non-cultivation cannabis operations shall prepare a materials management program that will address each permit type sought within a site. The program shall include:	Humboldt County	These mitigation measures will be incorporated into the performance standards and application requirements of the proposed ordinance.	- -
	 a detailed description of activities and processes occurring on site, including: equipment type and number; detailed standard operating procures for processes; chemical requirements and reactions; cleaning procedures for equipment; and disposal methods for all materials (e.g., plant materials, solvents, empty containers); and type and quantity of items produced;

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
	 Material Safety Data Sheets for all chemical substances occurring on site; 			
	manifests for each chemical describing quantities purchased, date used, and quantities disposed;			
	facility site plan with storage map, showing where hazardous materials will be stored;			
	an inventory of all emergency equipment with the location and description of items, including:			' <u>-</u>
	 personal protective equipment; 			
	 fire extinguishing systems; 			
	 spill control equipment and decontamination equipment, and 			
	 communication and alarm systems. 			
	 an employee training plan that includes: 			
	 emergency response procedures and incident reporting, and 			
	 chemical handling procedures. 			
: ;	The materials management program shall be submitted to Humboldt County Division of Environmental Health and public agencies or private enterprises accepting waste materials, including CSDs and waste transfer stations. Commercial cannabis permits shall not be granted without approval of the materials management program relevant agencies.			
	Mitigation Measure 3.13-1b: Verification of adequate wastewater			
	service and necessary improvements for public wastewater systems.			
	Applicants shall determine whether sufficient wastewater treatment capacity exists for a proposed project. These determinations must ensure that the proposed development can			
	be served by its existing or planned treatment capacity and wastewater conveyance			
	through approval of the relevant service provider. If adequate capacity does not exist,			
	applicants shall coordinate with the relevant service provider to ensure that adequate			
	improvements are made accommodate the increased demand, and if not, infrastructure			
	improvements for the appropriate public service or utility shall be identified. The relevant public service provider or utility shall be responsible for undertaking project-level review			
:	as necessary to provide CEQA clearance and implementation of adopted mitigation			
-	measures for new facilities.

/

Impact	Mitigation Measure	Implementation Responsibility	Timing	Verification
Impact 3.13-2: Provision of sufficient water supplies and infrastructure needs.	 Mitigation Measure 3.13-2: Verification of adequate water supply and service for municipal water service. The County shall include the following additional water supply verification requirements in the ordinance for all new commercial cannabis operations that plan to obtain municipal water service; Applicants for new commercial cannabis operations that plan to obtain water from CSD or other entities will obtain, and provide to the County, written verification from the water service provider that adequate water supply is available to serve the site. If adequate capacity does not exist, applicants shall coordinate with the relevant service provider to ensure that adequate improvements are made to accommodate the increased demand, and if not, infrastructure improvements for the appropriate public service or utility shall be identified. The relevant public service provider or utility shall be responsible for undertaking project-level review as necessary to provide CEQA clearance for new facilities. 	Humboldt County	This mitigation measure will be incorporated into the performance standards and application requirements of the proposed ordinance.	
Impact 3.13-3: Potential to be served by a landfill with insufficient capacity or violate existing statues related to solid waste.	Mitigation Measure 3.13-3: Implement Mitigation Measure 3.13-1a.	See Impact 3.13-1	See Impact 3.13-1	1
