Botanical Survey Report

**APN# 210-051-060-000
33087 State Highway 36
Bridgeville, CA. 95526**

Prepared by
J. Regan Consulting
Eureka, CA.
September 2018

For
**MAD RIVER PROPERTIES, INC.
MCKINLEYVILLE, CA.**

Setting

The surveyed area is located in APN #

210-051-060-000

This parcel is located within Humboldt County, on the Larabee Valley USGS 7.5' quadrangle near the community of Bridgeville, CA.

The biogeographic region can be described using a three-tiered hierarchy of province, region, and sub-region. This site lies within the California Floristic Province, Northwestern California region, and North Coast Ranges sub-region. Elevation on site is approximately 2,700-3,000 feet above mean sea level. The project area is situated north of State Highway 36 and south of The Van Duzen River, a perennial fish bearing watercourse which joins the Eel River near Fortuna, CA and ultimately drains to the Pacific Ocean. Watercourses within the subject property drain south then east to unnamed tributaries to Butte Creek which flows north into the Van Duzen River.

Habitat Description

Habitat within the plan area is varied and shows signs of past disturbance and land management activities. The approximately 40 acre parcel is largely composed of *Pseudotsuga menzeisii* (**Douglas' fir Forest**) **Forest Alliance** (Sawyer 2009) which has been entered for commercial timber harvest in the past. Skid trails, old logging roads and crossings, as well as landings and cleared areas are evident throughout the stand. Understory vegetation is generally light except on stand edges, in canopy openings, or along larger perennial watercourses. Soils are sometimes rocky and several large rock outcrops exist scattered within the parcel. The western quarter of the parcel contains a transition zone between Douglas' fir Forest into more open mix black oak and white oak woodland surrounded by and subtended by open foothill and valley grassland with a mix of native and non-native grasses and herbs. This habitat may be described as a mix of *Quercus garryana* (**Oregon white oak woodland**) **Woodland Alliance** and *Quercus kelloggii* (**California black oak forest**) **Woodland Alliance** (Sawyer 2009). The subject parcel contains two larger perennial watercourses and several seasonal tributaries. Some portions of the old road and skid trail system hold ponded water and present potential habitat for wet meadow or riparian species outside of riparian areas. A vegetation and habitat location map is included in Attachment A.

Any development within the project area has the potential to significantly alter and impact the existing vegetation on site at this time. This survey and report is intended to satisfy any project needs for botanical survey and mitigation for rare or endangered plant species and sensitive vegetation communities under the California Environmental Quality Act (CEQA). If sensitive plant species are detected within the project boundaries appropriate measures to avoid and/or mitigate impacts to those species shall be developed by a qualified professional and delivered to the appropriate agencies for review. These same measures are listed in CEQA, Section 15370.

- Avoid the impact altogether by not taking a certain action
- Minimize impacts by limiting the degree or magnitude of the action
- Rectify the impact by repairing, rehabilitating, or restoring the impacted environment
- Reduce or eliminate the impact over time by preservation and maintenance operations during the life of the project
- Compensate for the impact by replacing or providing substitute resources or environments

Soils

The USDA web soil survey was queried for soil survey data for the project area. A soil map and short report were downloaded and are included in Attachment B. The majority of the project area falls into a soil map unit labeled as: Rockyglen – Tannin complex and Pasturerock – Coyoterock – Maneze complex. Additionally, the publication “*Soils of Western Humboldt County, California*” (McLaughlin 1965) was also queried for the subject parcel and shows the area to be composed of Yorkville, Tyson, Melbourne, and Josephine soil types.

Survey Methods

Surveys/Habitat Assessment for this project was conducted on 1 September 2018. The surveys were conducted by Mr. James Regan. Mr. Regan holds a bachelors’ degree in botany and has experience working as a professional botanist in northern California for the past 15 years. Approximately 5 field hours were spent on surveys (~8 acres/hour). Maps showing survey routes are included as Attachment B. Surveys were done as an intuitive assessment of potential habitats based on personal knowledge and visible environmental features such as canopy cover, slope, soil texture, aspect, hydrologic features, and associated tree, shrub, and herbaceous plant species (if present). The botanical survey was floristic in nature and seasonally appropriate, when possible. This survey protocol is based on Protocol for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFG 2018). A list of sensitive plant species that have the potential to occur in this area is provided in Attachment A. This list is the result of a compilation of occurrence data from the California Native Plant Society (CNPS) and California Natural Diversity Database (CNDDB). Sources were queried for the Larabee Valley USGS 7.5’ quadrangle and the 8 quadrangles immediately adjacent. Plant species with potential habitat within the project area are noted. All other species listed are described as existing in habitat types that are not found within the project area. Plant species ranked by the CNPS as California Rare Plant Rank (CRPR) 1 and 2 with potential habitat within the project area are considered the primary focus of seasonal surveys. This ranking includes plants listed under the California Endangered Species Act (CESA) and the Federal Endangered Species Act (FESA) as well as candidate species for either of those lists. CRPR list 3 and 4 plants are recorded and reported if found within the project area and will be considered for mitigation if appropriate. A complete list of species encountered is found in Attachment C. A number of the plant species with potential habitat in the plan area would not have been present in an identifiable condition at the time of survey; these species are presented in bold font in the scoping table in Attachment C. Surveys were conducted very early in the month of September, these surveys should be considered appropriate for plants with bloom times extending into

August. This includes *Carex praticola* (northern meadow sedge) which would have been in fruit and in a condition favorable to identification at the time of survey. *Arctostaphylos manzanita* ssp. *canescens* (Konocti manzanita) can be identified without blooming flowers, 2018 survey efforts are appropriate to locate and identify this species if it were present.

These surveys also seek to detect and describe natural and sensitive vegetation communities as described in the Manual of California Vegetation (Sawyer 2009) and those vegetation communities and alliances listed as "sensitive" by the CNDDDB.

Results/Recommendations

No rare, threatened, sensitive, or endangered plants listed in the state of California were encountered during 2018 surveys for this property. The subject property does contain potential habitat for listed plants; these habitats were surveyed in the appropriate time frame for a portion of the potential sensitive plants that may be found in these habitat types in this region but were not suitable for the remainder of the potential sensitive plant species. Prior to development or land management activities I highly recommend conducting additional survey in spring of 2019 for those species with bloom times prior to August with habitat in the subject parcel including: *Montia howellii* (Howell's montia) along roads and skid trails, *Erythronium revolutum* and *E. oregonum* (fawn lilies) within riparian areas and stream channels, *Lupinus constancei* (The Lassics lupine), *Sabulina decumbens* (The Lassics sandwort), and *Thermopsis robusta* (robust false lupine) in upland areas on stand edges and on rocky soil types. I recommend two additional surveys take place one in late April or early May and one in mid-June to early July in order to adequately cover all potential habitats within the appropriate time frame. These future survey events may be restricted to areas with planned future development and do not necessarily need to take place in areas without planned development or planned activity that has the potential to impact sensitive plants or their associated habitats.

The subject parcel does contain vegetation communities considered sensitive in California including: ***Quercus garryana* (Oregon white oak woodland) Woodland Alliance**. This vegetation type is found in small pockets mixed with black oak, Douglas' fir, madrone, and others on the eastern boundary of the subject parcel. Management plans should include measures which retain Oregon white oak individually and in small stands. Removal of encroaching fir and tan oak trees may help maintain this sensitive vegetation type.

Please feel free to call with any questions.

<i>Thermopsis robusta</i>	robust false lupine	1B.2	G2	S2	None	None	May-Jul	Broadleafed upland forest, North Coast coniferous forest		Potential

Rank Definitions

Global Conservation Status Definitions

Listed below are definitions for interpreting NatureServe global (range-wide) conservation status ranks. These ranks are assigned by NatureServe scientists or by a designated lead office in the NatureServe network.

- G1 Critically Imperiled**—At very high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.
- G2 Imperiled**—At high risk of extinction or elimination due to very restricted range, very few populations, steep declines, or other factors.
- G3 Vulnerable**—At moderate risk of extinction or elimination due to a restricted range, relatively few populations, recent and widespread declines, or other factors.
- G4 Apparently Secure**—Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- G5 Secure**—Common; widespread and abundant.
- G#G# Range Rank**—A numeric range rank (e.g., G2G3, G1G3) is used to indicate the range of uncertainty about the exact status of a taxon or ecosystem type. Ranges cannot skip more than two ranks (e.g., GU should be used rather than G1G4).

Intraspecific Taxon Conservation Status Ranks

- T# Intraspecific Taxon** (trinomial)—The status of intraspecific taxa (subspecies or varieties) are indicated by a “T-rank” following the species' global rank. Rules for assigning T-ranks follow the same principles outlined above. For example, the global rank of a critically imperiled subspecies of an otherwise widespread and common species would be G5T1. A T subrank cannot imply the subspecies or variety is more abundant than the species. For example, a G1T2 subrank should not occur. A vertebrate animal population, (e.g., listed under the U.S. Endangered Species Act or assigned candidate status) may be tracked as an intraspecific taxon and given a T-rank; in such cases a Q is used after the T-rank to denote the taxon's informal taxonomic status.

Subnational (S) Conservation Status Ranks

- S1 Critically Imperiled**—Critically imperiled in the jurisdiction because of extreme rarity or because of some factor(s) such as very steep declines making it especially vulnerable to extirpation from the jurisdiction.
- S2 Imperiled**—Imperiled in the jurisdiction because of rarity due to very restricted range, very few populations, steep declines, or other factors making it very vulnerable to extirpation from jurisdiction.
- S3 Vulnerable**—Vulnerable in the jurisdiction due to a restricted range, relatively few populations, recent and widespread declines, or other factors making it vulnerable to extirpation.
- S4 Apparently Secure**—Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- S5 Secure**—Common, widespread, and abundant in the jurisdiction.
- S#S# Range Rank** — A numeric range rank (e.g., S2S3 or S1S3) is used to indicate any range of uncertainty about the status of the species or ecosystem. Ranges cannot skip

more than two ranks (e.g., SU is used rather than S1S4).

Rank Qualifiers

- ?** **Inexact Numeric Rank**—Denotes inexact numeric rank; this should not be used with any of the Variant Global Conservation Status Ranks or GX or GH.
- Q** **Questionable taxonomy that may reduce conservation priority**—Distinctiveness of this entity as a taxon or ecosystem type at the current level is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, or inclusion of this taxon or type in another taxon or type, with the resulting taxon having a lower-priority (numerically higher) conservation status rank. The “Q” modifier is only used at a global level and not at a national or subnational level.

The California Rare Plant Ranks

- 1A. Presumed extirpated in California and either rare or extinct elsewhere
- 1B. Rare or Endangered in California and elsewhere
- 2A. Presumed extirpated in California, but more common elsewhere
- 2B. Rare or Endangered in California, but more common elsewhere
- 3. Plants for which we need more information - Review list
- 4. Plants of limited distribution - Watch list

1A: Plants Presumed Extirpated in California and either rare or extinct elsewhere

The plants of Rank 1A are presumed extirpated because they have not been seen or collected in the wild in California for many years. This rank includes those plant taxa that are both presumed extinct, as well as those plants which are presumed extirpated in California and rare elsewhere. A plant is extinct if it no longer occurs anywhere. A plant that is extirpated from California has been eliminated from California, but may still occur elsewhere in its range.

1B: Plants Rare, Threatened, or Endangered in California and Elsewhere (Includes Rare Plant Ranks 1B.1, 1B.2, 1B.3)

The plants of Rank 1B are rare throughout their range with the majority of them endemic to California. Most of the plants that are ranked 1B have declined significantly over the last century. California Rare Plant Rank 1B plants constitute the majority of plant taxa tracked by the CNDDDB, with more than 1,000 plants assigned to this category of rarity.

2A: Plants Presumed Extirpated in California, but more common elsewhere

The plants of Rank 2A are presumed extirpated because they have not been seen or collected in the wild in California for many years. This rank includes only those plant taxa that are presumed extirpated in California, but that are more common elsewhere in their range. Note: Plants of both Rank 1A and 2A are presumed extirpated in California; the only difference is the

status of the plants outside of the state.

2B: Plants Rare, Threatened, or Endangered in California, but More Common Elsewhere (Includes Rare Plant Ranks 2B.1, 2B.2, 2B.3)

The plants of Rank 2B are rare, threatened or endangered in California, but more common elsewhere. Plants common in other states or countries are not eligible for consideration under the provisions of the **Federal** Endangered Species Act; however they are eligible for consideration under the **California** Endangered Species Act. This rank is meant to highlight the importance of protecting the geographic range and genetic diversity of more widespread species by protecting those species whose ranges just extend into California. Note: Plants of both Rank 1B and 2B are rare, threatened or endangered in California; the only difference is the status of the plants outside of the state.

Threat Ranks:

The California Rare Plant Ranks (CRPR) use a decimal-style threat rank. The threat rank is an extension added onto the CRPR and designates the level of threats by a 1 to 3 ranking with 1 being the most threatened and 3 being the least threatened. So most CRPRs read as 1B.1, 1B.2, 1B.3, etc. Note that some Rank 3 plants do not have a threat code extension due to difficulty in ascertaining threats for these species. Rank 1A and 2A plants also do not have threat code extensions since there are no known extant populations of the plants in California.

Threat Code extensions and their meanings:

- .1** - Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat)
- .2** – Moderately threatened in California (20-80% of occurrences threatened / moderate degree and immediacy of threat)
- .3** – Not very threatened in California (<20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Humboldt County, Central Part, California
Survey Area Data: Version 3, Sep 11, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 10, 2014—Mar 13, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

<i>Holodiscus discolor</i>	oceanspray
<i>Rosa gymnocarpa</i>	wood rose
<i>Rubus leucodermis</i>	white-stemmed raspberry
<i>Rubus ursinus</i>	Pacific bramble or California blackberry
<i>Toxicodendron diversilobum</i>	poison-oak
Herbaceous Layer	
<i>Achillea millefolium</i>	common yarrow
<i>Acmispon americanus</i>	spanish lotus
<i>Adenocaulon bicolor</i>	trail plant
<i>Agoseris</i> sp.	agoseris
<i>Agrostis</i> sp.	bent grass
<i>Aira caryophyllea</i>	silver European hairgrass
<i>Allium</i> sp.	onion
<i>Anthoxanthum odoratum</i>	sweet vernal grass
<i>Apocynum androsaemifolium</i>	bitter dogbane
<i>Arrhenatherum elatius</i>	tall oatgrass
<i>Aster radulinus</i>	rough-leaved aster
<i>Asyneuma prenanthoides</i>	California harebell
<i>Athyrium filix-femina</i>	lady fern
<i>Avena barbata</i>	slender wild oat
<i>Brodiaea terrestris</i>	dwarf brodiaea
<i>Bromus carinatus</i>	California brome
<i>Bromus diandrus</i>	ripgut grass
<i>Bromus hordeaceus</i>	soft chess
<i>Bromus tectorum</i>	cheat grass
<i>Cardamine oligosperma</i>	western bittercress
<i>Carex bolanderi</i>	Bolander's sedge
<i>Carex gynodynema</i>	Olney's hairy sedge
<i>Carex harfordii</i>	Hartford's sedge
<i>Carex tumulicola</i>	foothill sedge

<i>Centaurea solstitialis</i>	yellow starthistle
<i>Chlorogalum pomeridianum</i> var. <i>pomeridianum</i>	soap plant
<i>Cirsium vulgare</i>	bull thistle
<i>Clinopodium douglasii</i>	yerba buena
<i>Collomia heterophylla</i>	varied-leaf collomia
<i>Convolvulus arvensis</i>	field bindweed
<i>Corallorhiza</i> sp.	coralroot
<i>Crepis capillaris</i>	smooth hawk's beard
<i>Cynoglossum grande</i>	hound's-tongue
<i>Cynosurus echinatus</i>	hedgehog dogtail grass
<i>Dactylis glomerata</i>	orchard grass
<i>Danthonia californica</i>	California oatgrass
<i>Daucus pusillus</i>	rattlesnake weed
<i>Dipsacus sativus</i>	Fuller's teasel
<i>Elymus caput-medusae</i>	medusa head grass
<i>Elymus elemoides</i>	squirrel tail grass
<i>Epilobium brachycarpum</i>	parched fireweed
<i>Epilobium</i> sp.	willowherb
<i>Festuca californica</i>	California fescue
<i>Festuca idahoensis</i>	Idaho fescue
<i>Festuca myuros</i>	foxtail fescue
<i>Festuca perennis</i>	perennial ryegrass
<i>Festuca pratensis</i>	meadow fescue
<i>Fragaria vesca</i>	wood strawberry
<i>Galium</i> sp.	bedstraw
<i>Hieracium albiflorum</i>	white hawkweed
<i>Holcus lanatus</i>	common velvet grass
<i>Hypericum perforatum</i>	Klamath weed or common St. John's-wort
<i>Hypochaeris radicata</i>	hairy cat's-ear
<i>Iris</i> sp.	iris
<i>Juncus bolanderi</i>	Bolander's rush
<i>Juncus effusus</i>	common rush
<i>Juncus patens</i>	spreading rush
<i>Lactuca</i> sp.	wild lettuce
<i>Lathyrus vestitus</i>	wood pea
<i>Lonicera hispidula</i>	hairy honeysuckle
<i>Luzula comosa</i>	common wood rush
<i>Madia sativa</i>	coast tarweed
<i>Madia</i> sp.	tarweed
<i>Maianthemum stellatum</i>	star Solomon's seal
<i>Mentha pulegium</i>	pennyroyal
<i>Mimulus moschatus</i>	musk monkey flower
<i>Osmorhiza berteroi</i>	mountain sweet-cicely
<i>Pellaea andromedifolia</i>	coffee fern
<i>Phalaris minor</i>	Mediterranean canarygrass
<i>Piperia transversa</i>	royal rein orchid

<i>Plantago lanceolata</i>	English plantain
<i>Poa</i> sp.	bluegrass
<i>Polypodium</i> sp.	polypody
<i>Polystichum munitum</i>	sword fern
<i>Prosartes</i> sp.	fairy bells
<i>Prunella vulgaris</i>	self-heal
<i>Pteridium aquilinum</i> var. <i>pubescens</i>	western bracken fern
<i>Ranunculus repens</i>	creeping buttercup
<i>Raphanus sativus</i>	wild radish
<i>Rumex acetosella</i>	sheep sorrel
<i>Rumex conglomeratus</i>	clustered dock
<i>Sanicula crassicaulis</i>	Pacific snakeroot
<i>Spergularia rubra</i>	purple sand spurry
<i>Tellima grandiflora</i>	fringe cups
<i>Torilis arvensis</i>	field hedge-parsley or rattlesnake weed
<i>Tragopogon</i> sp.	goat's beard or salsify
<i>Trifolium eriocephalum</i> ssp. <i>eriocephalum</i>	hairy head clover
<i>Trifolium glomeratum</i>	clustered clover
<i>Trisetum cernuum</i>	nodding oatgrass
<i>Triteleia laxa</i>	Ithuriel's spear or Wally basket
<i>Vancouveria hexandra</i>	northern inside-out flower
<i>Verbascum thapsus</i>	woolly mullein
<i>Vicia sativa</i> ssp. <i>nigra</i>	narrow-leaved vetch
<i>Viola glabella</i>	smooth violet
<i>Viola ocellata</i>	two-eyed violet or western heart's ease
