Initial Biological Assessment:

**Planned Home Development
4721 Union St - Eureka, CA**

Humboldt County

APN: 301-052-036

**Prepared by
Hohman and Associates
July 22, 2024**

Setting

This document assesses habitats and potentially occurring special-status animals and plants; and identifies potential impacts of operation-related activities on biological resources for the proposed home development at 4721 Union St. in Eureka, CA. The proposed development would occur in a small mowed field located adjacent to existing structures and cell tower infrastructure within a suburban neighborhood. A lone Monterey pine (*Pinus radiata*) exists in the Northwest corner of the project area. The entire property has evidence of continual vegetation management (e.g. mowing). This assessment assumes that all potential impacts from the development will occur throughout the mowed field.

The proposed development location is approximately 0.5 acres located on a parcel located at 4721 Union St. in Eureka, CA. The property is located in Section 8, Township 3 North, Range 1 West; HB&M, approximately 2 miles south of Eureka, CA in Humboldt County on the Eureka USGS 7.5' Quad. The property lies within the California Floristic Province, Northwestern California region, and North Coast sub-region. No watercourses exist in the project area, and no fish-bearing streams exist in the parcel. Elevation of the parcel is approximately 130 feet, and no discernable slope exists in the project area. The project area is composed entirely of a non-native grassland, which is mowed frequently by the landowner.

Summary of Findings

The project area lies within a mowed field of non-native grassland surrounded by a broad swath of suburban homes. No evidence of listed plant species was observed in and around the project area, so no botanical survey is recommended. The area does not provide the high canopy-closure forest habitat that could support northern spotted owls, and no occurrences of NSO have been recorded within the 0.7 mile BAA. Although a single Monterey pine (*Pinus radiata*) exists on the north end of the parcel, noise from generators beneath the adjacent cell tower would prevent any raptors or large wading shorebirds from utilizing this tree as a nesting site. The habitat requirements of special status mammals within the BAA make the project footprint unsuitable for these species. The project may avoid indirect impacts to special-status fish, amphibians, and reptiles by remaining within the confines of the proposed project area, which avoids all wetland locations. No further biological surveys are recommended prior to project activity. If newly discovered special-status species are observed, consultation with CDFW should be conducted and the results of that consultation shall be amended into the project before operations begin again.

Methods

Hohman and Associates conducted a field review in July of 2024 of the project footprint and surrounding habitat in the parcel. This included looking for signs of listed species and available habitat.

This Biological Scoping report considers the potentially occurring species and communities that could be affected by project activities in the proposed footprint based on available spatial data and habitat requirements. Focused site visits may be necessary to further evaluate potential habitat value to special-status species and finalize survey recommendations for proposed project activity. A list of special-status species was downloaded from CNDDDB BIOS for the Eureka 9-quad area. Species on the CNDDDB list were primarily included based on State or Federal listing status or CDFW designation. Native pollinators found in the area were also included based on State rarity and their potential to be impacted by project activities. The U.S. Fish and Wildlife Service IPac was queried and generated a scoping list to consider. Additional species were added to the special-status list for consideration based on potential habitat or high levels of conservation concern. Habitats within the 0.7-mile Biological Assessment Area (BAA) for potentially occurring species were evaluated based on CALVEG vegetation mapping and aerial photos.

<i>Lathyrus palustris</i>	marsh pea	None	None	G5	S2	2B.2	Bogs and fens, lower montane coniferous forest, marshes and swamps, north coast coniferous forest, coastal prairie, coastal scrub.	Yes
<i>Layia carnosa</i>	beach layia	Threatened	Endangered	G2	S2	1B.1	Coastal dunes, coastal scrub.	Yes
<i>Lilium occidentale</i>	western lily	Endangered	Endangered	G1G2	S1	1B.1	Coastal scrub, freshwater marsh, bogs and fens, coastal bluff scrub, coastal prairie, north coast coniferous forest, marshes and swamps.	Yes
<i>Lycopodium clavatum</i>	running-pine	None	None	G5	S3	4.1	Lower montane coniferous forest, north coast coniferous forest, marshes and swamps.	Yes
<i>Mitellastrum caulescens</i>	leafy-stemmed mitrewort	None	None	G5	S4	4.2	Broadleafed upland forest, lower montane coniferous forest, meadows and seeps, north coast coniferous forest.	No
<i>Monotropa uniflora</i>	ghost-pipe	None	None	G5	S2	2B.2	Broadleafed upland forest, north coast coniferous forest.	No

Montia howellii	Howell's montia	None	None	G3G4	S2	2B.2	Meadows and seeps, north coast coniferous forest, vernal pools.	Yes
Oenothera wolfii	Wolf's evening-primrose	None	None	G2	S1	1B.1	Coastal bluff scrub, coastal dunes, coastal prairie, lower montane coniferous forest.	Yes
Puccinellia pumila	dwarf alkali grass	None	None	G5	SH	2B.2	Marshes and swamps.	Yes
Sidalcea malachroides	maple-leaved checkerbloom	None	None	G3	S3	4.2	Broadleaved upland forest, coastal prairie, coastal scrub, north coast coniferous forest, riparian forest.	Yes
Sidalcea malviflora ssp. patula	Siskiyou checkerbloom	None	None	G4G5T2	S2	1B.2	Coastal bluff scrub, coastal prairie, north coast coniferous forest.	Yes
Sidalcea oregana ssp. eximia	coast checkerbloom	None	None	G5T1	S1	1B.2	Meadows and seeps, north coast coniferous forest, lower montane coniferous forest.	Yes
Silene scouleri ssp. scouleri	Scouler's catchfly	None	None	G5T4T5	S2S3	2B.2	Coastal bluff scrub, coastal prairie, valley and foothill grassland.	No
Spergularia canadensis var. occidentalis	western sand-spurrey	None	None	G5T4	S1	2B.1	Marshes and swamps (coastal salt marshes).	Yes
Trichodon cylindricus	cylindrical trichodon	None	None	G4G5	S2	2B.2	Broadleaved upland forest, upper montane coniferous forest, meadows and seeps.	No
Viola palustris	alpine marsh violet	None	None	G5	S1S2	2B.2	Coastal scrub, bogs and fens.	No

Special-Status Species Details

Birds

Sharp-shinned hawk (*Accipiter striatus*)

Special Status: CDFW Fully Protected; Protected under Migratory Bird Treaty Act.

Habitat/Life-history Requirements: The sharp-shinned hawk roosts in intermediate to high-canopy forest and nests in dense, even-aged, single-layered forest canopy. Nest is a platform or cup in dense foliage against trunk, or in main crotch of tree, usually 6-80 ft above ground.

Status within the Project Area: Nesting is highly unlikely given their typical seasonality and noise from nearby cell tower generators.

Potential Impact/Mitigation Due to the lack of contiguous forest, no significant impact from project activity is expected.

Great egret (*Ardea alba*)

Special Status: Protected under Migratory Bird Treaty Act.

Habitat/Life-history Requirements: The great egret is a common yearlong resident throughout California, except for high mountains and deserts. Feeds and rests in fresh, and saline emergent wetlands, along the margins of estuaries, lakes, and slow-moving streams, on mudflats and salt ponds, and in irrigated croplands and pastures. Nests in large trees, and roosts in trees. Nests are usually near water at a height of 10-80ft and nesting activity is very sensitive to frequent human disturbance.

Status within the Project Area: No nesting or foraging locations exist within the project area. Noise from nearby cell tower generators would prevent nesting.

Potential Impact/Mitigation Project operations would not significantly impact nesting habitat, no mitigation is necessary.

Great blue heron (*Ardea herodias*)

Special Status: USFS.S.

Habitat/Life-history Requirements: The great blue heron is fairly common all year throughout most of California, in shallow estuaries and fresh and saline emergent wetlands. Less common along riverine and rocky marine shores, in croplands, pastures, and in mountains above foothills. Usually nests in colonies in tops of secluded large snags or live trees, usually among the tallest available; rarely nests on ground, rock ledges, sea cliffs, mats of tules, or shrubs. Nesting activity is sensitive to human disturbance.

Status within the Project Area: No nesting or foraging locations exist within the project area. Noise from nearby cell tower generators would prevent nesting.

Potential Impact/Mitigation: Project operations would not significantly impact nesting habitat, no mitigation is necessary.

Northern harrier (*Circus hudsonius*)

Special Status: CDF – Sensitive.

Habitat/Life-history Requirements: Frequents meadows, grasslands, open rangelands, desert sinks, fresh and saltwater emergent wetlands; seldom found in wooded areas. Permanent resident of the northeastern plateau and coastal areas; less common resident of the Central Valley. Widespread winter resident and migrant in suitable habitat. California population has decreased in recent decades. Nests on the ground in shrubby vegetation or tall grasses, often near wetlands.

Status within the Project Area: No suitable nesting or foraging sites exist within the project area, as the field is mowed to a length insufficient for nesting or harboring prey animals.

Potential Impact/Mitigation: Project operations would have no significant impact to nesting or foraging.

Snowy egret (*Egretta thula*)

Special Status: CDF – Species of Special Concern; Protected under Migratory Bird Treaty Act.

Habitat/Life-history Requirements: The snowy egret is widespread in California along shores of coastal estuaries, fresh and saline emergent wetlands, ponds, slow-moving rivers, irrigation ditches, and wet fields. Feeds in shallow water or along shores of wetlands or aquatic habitats, and is the most active feeder of the California herons. Can nest either low in trees or on the ground in dense marshes.

Status within the Project Area: No nesting or foraging locations exist within the project area. Noise from nearby cell tower generators would prevent nesting.

Potential Impact/Mitigation: Project operations would have no significant impact to nesting or foraging.

White-tailed kite (*Elanus leucurus*)

Special Status: CDFW – Species of Special Concern.

Habitat/Life-history Requirements: Common to uncommon, yearlong resident in coastal and valley lowlands; rarely found away from agricultural areas. Inhabits herbaceous and open stages of most habitats mostly in cismontane California. Typically nests near the top of available tree species adjacent to foraging ground (e.g. grassland and meadows).

Status within the Project Area: No nesting or foraging locations exist within the project area. Noise from nearby cell tower generators would prevent nesting.

Potential Impact/Mitigation: Project operations would have no significant impact to nesting or foraging.

Bald Eagle (*Haliaeetus leucocephalus*)

Status: State Endangered, Federally Delisted August 8, 2007, CDFW “Fully Protected”, and BOF Sensitive Species

Habitat/Life-history Requirements: Requires large bodies of water or free flowing rivers with abundant fish populations, with adjacent snags or other perches. Fish are a primary source of prey, and bald eagles are typically found in forested areas near large fish-bearing waters. Bald eagles build large nests about 6 feet wide. Nests are typically found in large trees, but may be built on other available vegetation or structures.

Status within the Project Area: No suitable dead tops or snags exist within the project area, thus no suitable nesting site exists.

Potential Impact/Mitigation: The project will not significantly impact nesting Bald Eagles or their habitat.

Black-crowned night heron (*Nycticorax nycticorax*)

Special Status: CDFW – Watchlist.

Habitat/Life-history Requirements: The black-crowned night-heron is a fairly common, yearlong resident in lowlands and foothills throughout most of California. Can nest either low in trees or on the ground in dense marshes. Feeds along the margins of lacustrine, large riverine, and fresh and saline emergent habitats.

Status within the Project Area: No nesting or foraging locations exist within the project area. Noise from nearby cell tower generators would prevent nesting.

Potential Impact/Mitigation: Project operations would have no significant impact to nesting or foraging.

Osprey (*Pandion haliaetus*)

Special Status: CDFW Watch List; Protected under Migratory Bird Treaty Act; NatureServe Ranks: G5, S4

Family: Accipitridae

Habitat/Life-history Requirements: Ospreys primarily prey on fish and they require large fish-bearing waters for hunting (Zeiner et al. 1988). Ospreys typically make large nests in tall snags or trees high off the ground in open forest habitats (Zeiner et al.).

Status within the Project Area: Ospreys are unlikely to occur in the area directly impacted by the project due to the lack of suitable snags or dead tree tops for nesting.

Potential Impact/Mitigation: The project will not significantly impact nesting Osprey or their habitat.

Peregrine falcon (*Falco peregrinus anatum*)

Special Status: Federally Delisted, State Delisted, CDFW Fully Protected; Protected under Migratory Bird Treaty Act; NatureServe Ranks: G4T4, S3S4

Habitat/Life-history Requirements: The formerly federally endangered peregrine falcon was delisted in 1999 due to recovery (USFWS ECOS). The peregrine falcon is an uncommon year-round resident and migrant in California (Zeiner et al. 1988). Peregrine falcons typically use cliffs and ledges near bodies of water for cover and nesting areas, but they may also nest on buildings or bridges in the city (Sibley 2003, Cornell Lab). Peregrine falcons may breed in woodland, forest, or coastal habitat (Zeiner et al. 1988). Riparian and wetland areas are important habitat yearlong (Zeiner et al. 1988).

Status within the Project Area: No nesting habitat exists within the project area.

Potential Impact/Mitigation: No buildings or bridges are being removed with this project. The project will not significantly impact nesting peregrine falcons or their habitat.

Mammals

Sonoma tree vole (*Arborimus pomosus*)

Special status: G3, S3

Family: Muridae

Habitat/Life History Requirements: Sonoma tree voles occur in old-growth and other forests, mainly Douglas-fir, redwood, and montane hardwood-conifer habitats. Males nest most frequently in a tree nest constructed of fir needles, or, less frequently, in shallow burrows at the base of fir trees, beneath litter. Males nest most frequently in a tree nest constructed of fir needles, or, less frequently, in shallow burrows at the base of fir trees, beneath litter.

Status within the Project Area: No Douglas-fir or grand fir trees were present within the parcel when surveyed, thus no suitable foraging or nesting material was present in the project area.

Potential Impact/Mitigation: The project will not significantly impact Sonoma tree vole habitat.

Fisher - West Coast DPS (*Pekania pennanti*)

Special Status: CDFW Species of Special Concern; NatureServe Ranks: G5, S2S3

Habitat/Life-history Requirements: The fisher uses large expanses of forest with moderate to high canopy closure, and will avoid open forest, grasslands, and wetlands. Fishers use cavities in live trees, snags and down logs for reproductive dens. Structural complexity is a critical element of fisher habitat, necessary to provide cover for resting and denning, and habitat for prey.

Status within the Project Area: The project area does not contain fisher habitat due to the lack forested area in its vicinity.

Potential Impact/Mitigation: No impact to Fisher habitat is expected

Long-eared myotis (*Myotis evotis*)

Special Status: G5, S3

Habitat/Life-history Requirements: The long-eared myotis is widespread in California, but generally is believed to be uncommon in most of its range. It avoids the arid Central Valley and hot deserts, occurring along the entire coast and in the Sierra Nevada, Cascades, and Great Basin from the Oregon border south

through the Tehachapi Mts. to the Coast Ranges. This species has been found in nearly all brush, woodland, and forest habitats, from sea level to at least 9000 ft, but coniferous woodlands and forests seem to be preferred.

Status within the Project Area: No suitable habitat exists within the project area.

Potential Impact/Mitigation: No impact to long-eared myotis is expected.

Amphibians

Northern red-legged frog (*Rana aurora*)

Special Status: CDFW “Species of Special Concern”; NatureServe Ranks: G4, S3

Habitat/Life-history Requirements: Found in riparian areas and permanent bodies of relatively quiet water such as ponds, pools along streams, reservoirs, springs, lakes and marshes. This frog is highly aquatic, preferring shorelines with extensive vegetation for terrestrial cover and escaping to pools 3 feet or deeper.

Status within the Project Area: The project area does not contain any wet areas or watercourses, thus no high-quality habitat for northern red-legged frogs exists in the area.

Potential Impact/Mitigation: The project footprint does not intersect or impact areas of high quality Northern red-legged frog habitat.

Western pond turtle (*Actinemys marmorata*)

Special Status: CDFW Species of Special Concern; NatureServe Ranks: G3G4, S3

Family: Emydidae

Habitat/Life-history Requirements: The western pond turtle is associated with permanent or nearly permanent water in ponds, lakes, streams, irrigation ditches or permanent pools along intermittent streams (Ziener et al. 1988). Invasive American bullfrogs prey upon hatchlings and juveniles (Zeiner et al. 1988).

Status within the Project Area: The project area does not contain any permanent bodies of water, thus no habitat exists.

Potential Impact/Mitigation: The project footprint does not intersect or impact areas of high quality western pond turtle habitat.

Fishes

No suitable year-round watercourse exists within or adjacent to the project area, thus no fishes will be present or impacted by project activity. Suitable streams exist within the BAA, however the project area lies entirely outside of the County Streamside Management Areas (SMA).

Invertebrates

Obscure bumble bee (*Bombus caliginosus*)

Special Status: CDFW Special Animals List; NatureServe Ranks: G2G3, S1

Habitat/Life-history Requirements: The obscure bumble bee occupies open grassy coastal prairies and Coast Range meadows (IUCN). This long-tongued species may pollinate flowers with elongated corollas, such as *Keckiella* spp. (IUCN). The obscure bumblebee does not fare well in agricultural or urban/suburban environments, where it is often outcompeted by more common bumblebees (NatureServe 2017). The obscure bumblebee has declined in the San Francisco Bay area, and may be threatened by habitat loss from development (NatureServe 2017).

Potential Impact/Mitigation: The property has the potential to support many native pollinators, however, the project footprint currently consists of a large mowed field with minimal nectar sources. The project is not expected to have significant impacts on *Bombus* species.

Western bumble bee (*Bombus occidentalis*)

Special Status: State Candidate Endangered, NatureServe Ranks: G3, S1

Habitat/Life-history Requirements: The western bumble bee is a generalist short-tongued forager that may be found in open habitats such as grassy areas, urban parks and gardens, chaparral and shrub areas, and mountain meadows. Like many bumble bees, the western bumble bee nests underground in abandoned rodent holes. The western bumble bee is threatened by disease, habitat loss and degradation, and insecticides.

Potential Impact/Mitigation: The property has the potential to support many native pollinators, however, the project footprint currently consists of a large mowed field with minimal nectar sources. The project is not expected to have significant impacts on *Bombus* species.

Appendix A: Photos of Project Area

Picture 1. View of the project area looking north. Note the cell tower located roughly 80 feet north of the fenceline.

Picture 2. View of the project area looking south. Note the mowed vegetation and surrounding homes.

Picture 3. View of the project area's northwest corner, which contains a single Monterey pine.

Picture 4. The view of from the southern end of the project area looking toward Union St.

Appendix B: Maps
