

Director Ford,

In response to the concerns raised by neighbors to the Rolling Meadows Ranch Cannabis project the project proposes the following.

- 1) The project will use the Park and Ride and its bus to the extent possible to cut down on the individual car trips on McCann Road. If necessary, the project will periodically treat the dirt portion of McCann Road in front of residences with Lignin Oil or similar product to control dust.
- 2) The project will purchase a Tanker Truck to have on hand in case of fire.

Total prime Ag on parcel: 1,289,668 sqft

20% of prime ag: 257,933 sqft

Project Facilities #1-#16 total: 304,560 sqft

Facilities #1 and #10 are pre-existing and total: 39,240 sqft

Remaining New facilities total 265,320 sqft

Facility area not covered by prime ag (265,320sqft-257,933sqft) is 7,387 sqft

In three facilities (not #1 or #10) a 30ft x 84ft (2,520 sqft) section of the facility will be used for propagation. That will be a total 7,560 sqft of propagation space.

So the total New cultivation area for the project is 257,760 sqft. Which is less than the 257,933 sqft available.
