Hi Chris,

I received a referral for a parcel map subdivision on Union St (PLN-2025-19169; APN 301-052-036-000). It looks like the property is regularly mowed and that future development will entail minimal vegetation removal, aside from a Monterey pine and perhaps some small shrubs. My only recommendation is that any vegetation removal occur outside of nesting season (generally March 15 – August 15) to avoid impacts to native resident and migratory birds. If that's not feasible, a qualified biologist shall survey for active bird nests no more than seven days prior to tree removal or significant trimming. If an active nest is found, the permittee should consult with CDFW regarding appropriate site-specific avoidance measures and buffer distances. If there is a lapse in project-related activities of seven days or more, the biologist should re-survey the area before work resumes.

Thanks,
Katie
