E. Check each box below that applies to the project water rights and attach supporting documents.

- Riparian. *Attach the most recent Statement of Water Diversion and Use filed with the SWRCB.*
  - Diversion for immediate use.
  - Diversion to storage (for less than 30 days).
- Appropriative.
  - Pre-1914. *Attach the most recent Statement of Water Diversion and Use filed with SWRCB.*
  - Post-1914. *Attach a copy of the applicant's water right application, permit, or license filed with or issued by SWRCB.*
  - Small domestic, livestock stockpond, or small irrigation use registration. *Attach a copy of the applicant's registration of water use form filed with, or registration certificate issued by, SWRCB (See Water Code section 1228 et seq.).*
    - Diversion for immediate use.
    - Diversion to storage.
- Purchased or contracted water. *Attach a copy of the applicant's contract or letter from the applicant's water provider.*
- Other. *Describe below or attach separate page.*

The Applicant will be filing for a water right registration for Small Irrigation Use for Cannabis Cultivation and a Small Domestic Use Registration for domestic use for the spring and pond.

An Initial Statement of Diversion and Use for the spring and pond are attached (S027244 & S027245).

F. Approximate lowest level of flow in the river, stream, or lake at the point of diversion during the proposed season of diversion in gpm or cfs:

The Class III feeding the pond goes dry in late winter and is extremely ephemeral.

The Spring POD goes dry from April to October

G. *Other information.* After the Department reviews the project description, and based on the project's location and potential impacts to fish and wildlife resources, the Department will determine if additional information is needed before accepting the notification as complete. Such information could include more site-specific information to ensure that the terms and conditions in the Agreement issued to the applicant will be adequate to protect the fish and wildlife resources the diversion or obstruction could adversely affect. Site-specific information could include biological or hydrological studies or surveys based on the season of diversion, the location of the diversion relative to other diversions in the watershed, the method of diversion, and the quantity of water to be diverted, such as the following:

1. *Water Availability Analysis* to determine if the water can be diverted without causing substantial adverse effects on downstream fish and wildlife resources. Water availability analyses are based on a comparison of flows without any diversions (unimpaired flows) and flows available when all known diversions are “subtracted” (impaired flows).
2. *Instream Flow Study* to determine the minimum bypass flows needed and maximum rates of withdrawal possible to provide adequate depths and velocities to protect habitat for all life stages of aquatic resources. The study plan must be prepared by a qualified fisheries biologist and approved by the Department, will determine the effects of the proposed diversion on flow depth and velocity.
3. *Water Quality Study* to assess the effects of the proposed water diversion or impoundment on water temperature and water quality at and downstream from the point(s) of diversion.

## II. Permanent or Temporary Reservoir

Please provide the information below **if** the project includes the construction of a reservoir, whether permanent or temporary, and/or the filling of an existing reservoir by diverting or obstructing the flow of a river, stream, or lake.

H. Specify the time period when the area below the dam becomes dry, if at all.

I. The methods employed to ensure that adult and juvenile fish will be able to pass over or around the dam:

J. If a fish ladder is necessary to enable adult and juvenile fish to pass over or around the dam, provide construction plans and an operation plan for the fish ladder. *(Enclose, if applicable)*

K. The methods employed to monitor and maintain water quality (including temperature) within the reservoir:

### III. Temporary Reservoir

**Spring POD:** 40.04603513°; -123.5776721°

## **Addendum 10**

**Project Description:** This project is associated with County Application #11439, which proposes 8,600 ft<sup>2</sup> of outdoor cannabis cultivation within APN 218-031-008. Cannabis irrigation is from a combination of a groundwater well, rainwater catchment tanks, and an on-stream pond. Water is stored in existing tanks and bladders totaling approximately 100,000 gallons in capacity. Approximately 150,000 gallons of water are needed annually for the operation. The County has issued a Zoning Clearance Certificate for Interim Permit for this project dated December 15, 2017 (attached) for 7,077 ft<sup>2</sup> of outdoor cannabis cultivation.

**On-stream Pond POD:** The on-stream pond is approximately 80 feet in diameter with a maximum estimated depth of 8 feet and average depth of 3 feet, which equates to approximately 115,000 gallons in capacity. The pond is fed by two short segments of Class III watercourse as shown on the attached map. The pond's overflow drainage structure is a 12-inch diameter culvert underlying Island Mountain County Road. The pond was constructed between 2010 and 2012. The diversion structure is a screened 1.5-inch PVC pipe. Diversion from the pond has historically occurred in the winter months and then to a lesser degree as needed during the forbearance period. Because the pond is fed by Class III watercourses it generally dries up in the summer months with or without diversion to storage. This notification proposes year-round diversion to storage from the pond for cannabis cultivation irrigation. An Initial Statement of Diversion and Use is attached (S027245). The Applicant has been advised of the requirement per State Water Code sections 5100 and 1200 et seq. to obtain a Water Appropriation for diversion to storage. The Applicant will be filing for a water right registration for Small Irrigation Use for Cannabis Cultivation.

**Spring POD:** The POD is more accurately described as a seasonal shallow well, which is intercepting shallow groundwater during the winter months. The POD is an excavated hole backfilled with drain rock, approximately 4-5 feet in diameter and approximately 3-4 feet deep depth. The diversion structure is a screened ¾-inch diameter PVC pipe, which is connected to the numerous water tanks as mapped and pictured. Per the landowner, diversion from this POD is only from November to March because the source dries up in early spring. This notification proposes diversion to storage for domestic use and cannabis cultivation irrigation during the non-forbearance period (May 15 to October 15). An Initial Statement of Diversion and Use is attached (S027244). The Applicant has been advised of the requirement per State Water Code sections 5100 and 1200 et seq. to obtain a Water Appropriation for diversion to storage. The Applicant will be filing for a water right registration for Small Irrigation Use for Cannabis Cultivation and a Small Domestic Use Registration.

**Groundwater Well:** Permit-pending (Humboldt County Permit # 15/16-0155) drilled by Bushnell in 2016 with no well completion report. The well is 160 feet deep and located at an elevation of approximately 2,164 feet. The well's underlying geology is bedrock of Cretaceous age Central Belt Franciscan Complex. The Central Belt in this region consists of zones of mélange and undifferentiated sedimentary rocks. Franciscan mélange within the Central Belt consists of isolated blocks of hard rock composed of sandstone, siltstone, greenstone, chert, and pods of sheared carbonate rock, as well as exotic blue schist, green schist, and amphibolite schist. The well has been historically used to fill tanks throughout the year as needed.

## Addendum 10

**Water Storage and Use:** The Applicant has approximately 100,000 gallons of water storage comprised of one 20,000 gallon water bladder and 25 hard plastic tanks. Estimated water usage is approximately 150,000 gallons during the cultivation season. Water storage is filled primarily during the winter months (non-forbearance period) from the well, on-stream pond, and spring, and then topped off as needed from the Class III on-stream pond.

**Water Use by Month:**

May = 15,000 gallons  
June = 30,000 gallons  
July = 30,000 gallons  
August = 30,000 gallons  
September = 30,000 gallons  
October = 15,000 gallons

**Attachment E:** *“Remediate” means to perform work that reduces or eliminates the direct and indirect adverse impacts on fish and wildlife and their habitat caused by a project or activity the Department views as unlawful.* All crossings are located on the county road, and were installed by the county per whatever Agreement they have with CDFW. All roads and developed sites were assessed for compliance with CDFW, which includes jurisdictional 1600 sites and potential California Fish and Game Code Section 5650 violations. The Applicant is enrolled into *California Regional Water Quality Control Board North Coast Region Order No. 2015-0023, Waiver of Waste Discharge Requirements and General Water Quality Certification for Discharges of Waste Resulting from Cannabis Cultivation and Associated Activities or Operations with Similar Environmental Effects in the North Coast Region (WDID# 1816872CHUM)* with Pacific Watershed Affiliates. A Water Resource Protection Plan has not been prepared to date, however, based upon my evaluation and inspection of the property conducted in association with this notification, the assessment conducted for the preparation of the water resource protection plan is not expected to include any sites that are jurisdictional to CDFW per the California Fish and Game Code 1600 that should otherwise be included in this notification. The proposed project has been issued a Zoning Clearance Certificate Interim Permit dated December 15, 2017. The Applicant's agent is Aleida Gerena-Rios @ AGR Multiservices LLC.
