Dear Denise,

Thank you for your interest in the ST ViewScan microfilm scanner system! We were proud to install the ViewScan 4 in the Humboldt Room in 2019, and we look forward to working with you! Personally, I am also looking forward to visiting Eureka again. It's beautiful there, as you know.

ST Imaging is pleased to announce their **6th Digital Microform Reader/Printer/Viewer/Scanner System!** The new **ST ViewScan 4** Scanner System uses the **latest in digital technology and high end camera optics** to enhance and simplify the viewing, printing and saving of microfilm images. Our 9 megapixel image sensor yields excellent image quality for microfilm reels and microfiche cards, generating images up to 36 megapixels!

This technology lets us design the **ST ViewScan 4** scanner on a compact 12" x 12" base, saving valuable desk and floor space. Also, unlike older style reader printers that are boxy and require special workstations and utilize moving mirrors and scan heads each time you scan or print, the **ST ViewScan 4** has virtually no moving parts except for the internal zoom. This makes our system extremely reliable.

The ST ViewScan comes with PerfectView software which allows users to quickly improve the image, then crop pages and articles as desired, and print, save, or email as PDFs, JPEGs, and/or TIFFs. ST Imaging offers optional enhancements such as the ability to save as searchable PDFs using Abbyy, Cruise Control for batch-scanning reels of microfilm automatically, and a built in computer. I have included those as options, and I would be happy to answer any questions you may have about those.

Thank you again for this opportunity. We are confident the **ST ViewScan 4** Digital Microform Reader/Printer/Viewer/Scanner System will meet and exceed the expectations of the Microform retrieval needs. Please do not hesitate to contact me at 949-525-8613 if you have any questions. We look forward to working with you on your next digital microfilm scanner multi-media system!

Sincerely,

Travis R. Currier
