STX 5 completion let us know if you have any feedback or concerns!

This concludes the work we will complete during this dry period. Will renotify when we tackle the additional items in future dry seasons. Thank you.

Further details

STX 3 (Inlet clogged) we removed blackberry brush and dug out and relocated all the sediment that was clogging inlet to our spent soils storage area, we then rock armored the inlet and the bank above and surrounding the inlet. we spread straw on the areas where we disturbed the ground and we ran a wattle along the top of bank

STX 4 (shorten culvert to eliminate perch and add riprap) we shortened the culvert a couple feet and we added riprap to the area surrounding and below the outlet to prevent erosion.

We also did the following work recommended by you during your recent site visit.

(Cover Soil piles to prevent invasive species) we consolidated the soil piles and covered then with a heavy duty UV resistant poly cover which we secured to the ground using downed tree sections from around the property. We re-waddled the perimeter and spread straw on the disturbed area surrounding the piles.
