Comment on marijuana grow at North Fork Farms LLC Record number PLN-2020-16766 apn 105051009. hearing date is sept 16.

I have several points to make about this project based on their proposal you sent me and believe you/they must address them.

Noise,. Noise is a big concern for m. it comes from motors-fans. Are they going to use fans? Who will monitor noise levels?

Power. Solar is good. Pge - they have planned back up generator for solar until pgs comes in. when will pge come in? Is that certain? Pumps are loud. Generators are loud. They should wait until they have pge backup.

Water. Is 360k gallons enough for this project? How are they going to 'catch' water in winter. What happens when it;s a drought? Will they pump? From wells? From the river? What;s plan B for water. It should be to limit number of plants to the available caught water - by a certain cut off date. april 1 maybe. My well is sketchy in late september as it is. Does 'dry farming' really mean no water use? After what date?

Workers - are they living on site?

Smell and noise - How close to the road and residences is ths going to be? How close to the school?

Are they going to put up a big wall to block views?

Traffic - are big trucks going to haul in soil from afar? will this impac old coast wagon road?

Light pollution - will this impact nigt sky? Who will monitor this?

I don't have a problem with the outdoor plan if it is set back well from the road. The light dep greenhouses have fans, motors, lots of plastic, can have light impacts. They have to be done very carefully and monitored. I would prefer they not be done at all.

Thank you.
