

Existing Shelter Finder App Breakdown

The following are screenshots as well as brief explanations of the existing Shelter Finder App that would be incorporated into the UPLIFT-HEAP project, if successful in obtaining funding.

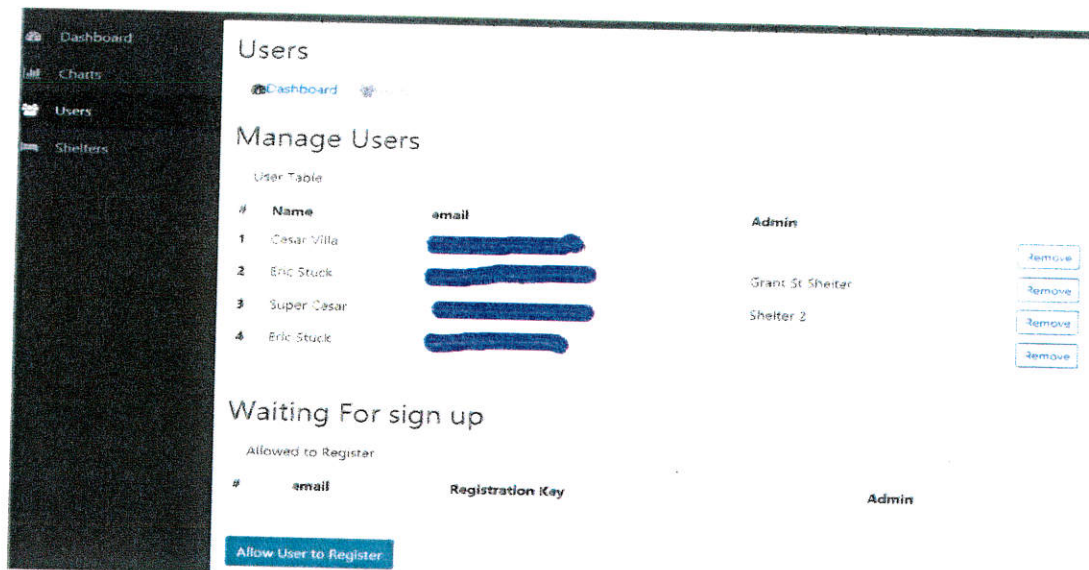

1. Desktop View: Dashboard

This first shot is what the administrator's board would look like. This screen shot is logged in as what is classified as a Super Administrator. Super Administrators are authorized representatives of shelters who have immediate access to the knowledge of availability's. This level of access can change, add or delete which shelters are available.

2. Desktop View: Charts

This second view showcases a tracking system of shelter beds available for any given period of time and shelter bed trends over time. Users can choose to view all shelters, or chose which This view will keep track of shelter beds available for any given period of time and shelter bed trends over time. You can choose to view all shelters, or choose which shelters to compare.

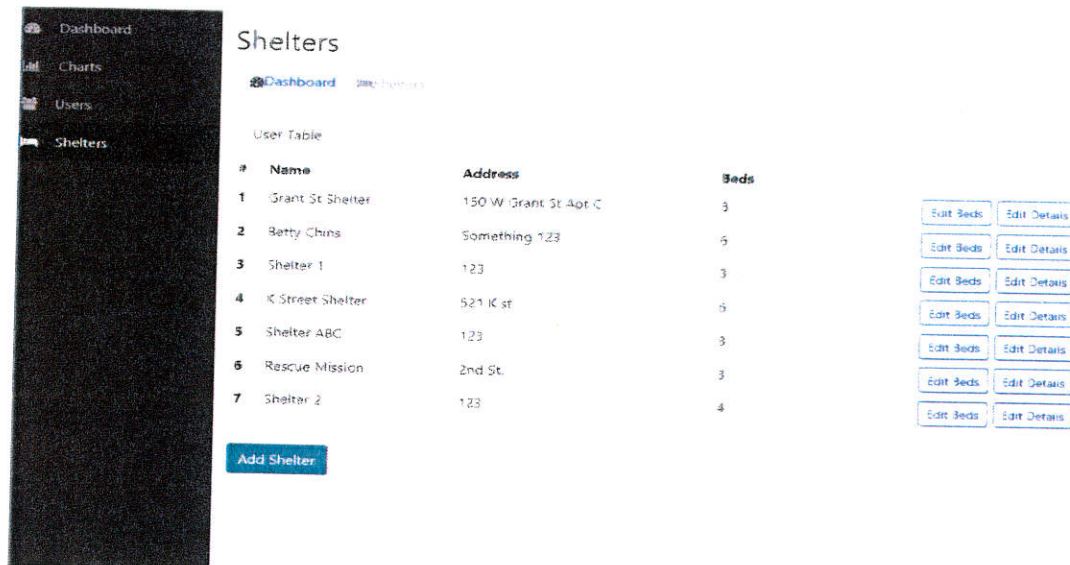

3. Desktop View: Users

This view showcases the *Super Administrators* ability to approve user registrations, or to remove users who may no longer be affiliated with a shelter.

Super Administrators are able to approve user registrations, or to remove users who may no longer be affiliated with a shelter.

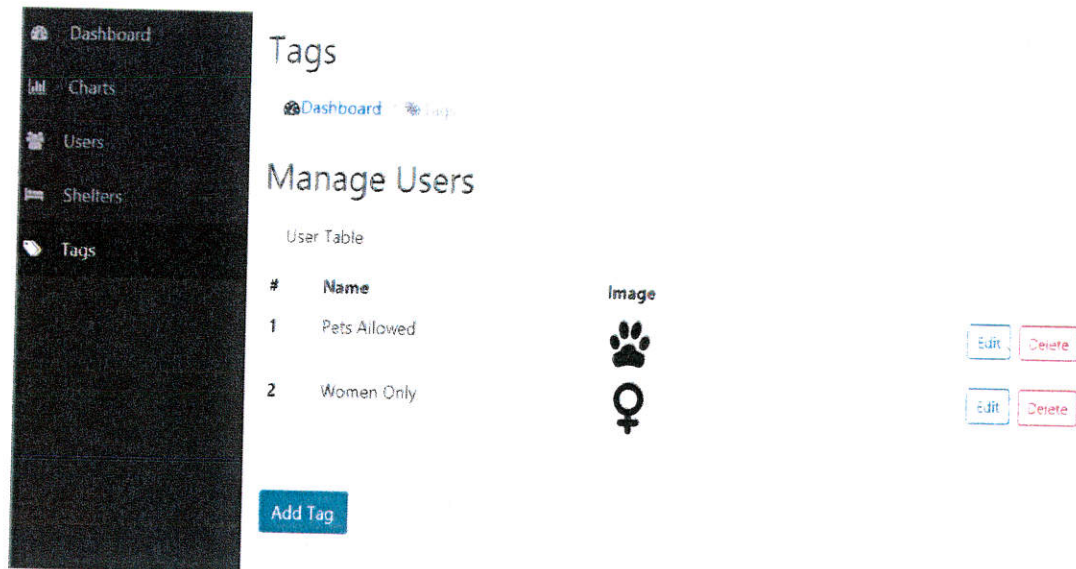

Desktop View: Shelters

4. Desktop View: Shelters

This view allows users to see all shelters participating in the app. *Super Administrators* can edit details of a shelter (description, any restrictions, etc.). *Super Administrators* are able to edit the number of beds available for the night. If a particular shelter has not updated the number of beds available, or they are unable to for any reason. *Super Administrators* can edit this for them.

If logged in as a *Shelter User*, changing the number of beds available is as simple as clicking plus (+) or minus (-). Shelters are able to choose their own administrators. Shelters can assign a few authorized representatives responsible for check-in. That shelter can choose to have multiple *Shelter Admins*, and they can update the number of available beds as people arrive or leave. This allows the number of beds available to have real-time accuracy.

5. Desktop View: Tags

This view allows Super Administrators to edit or delete “tags”. Tags are specific restrictions or regulations for a shelter. When a user is using the app, the icons are associated with the shelter to let the user know of any restrictions.

Shelter Chart

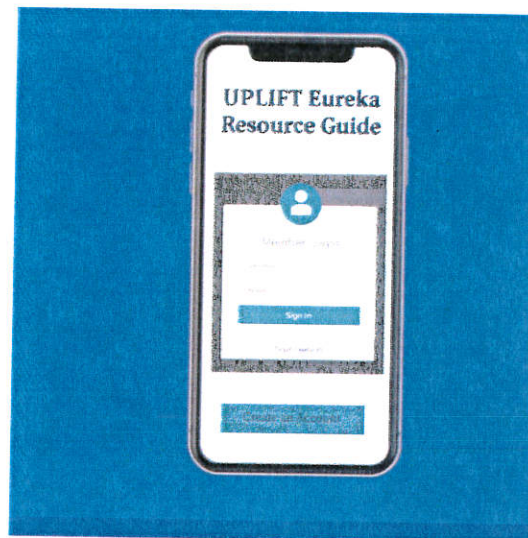

6. Mobile View: Shelter Chart

This is the mobile view of a Super Admin, but the view is identical to that of a Shelter Admin. The Shelter Info will list all specifics of the shelter, including the tags (under Summary). Shelter Admins can add or subtract beds available as needed.

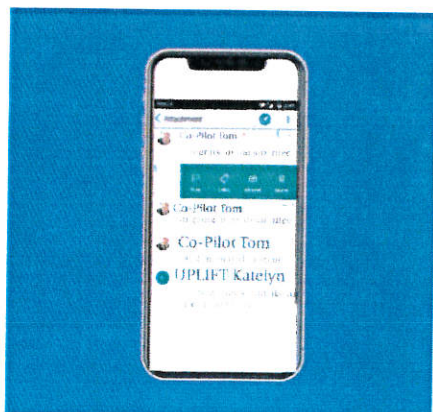

Expanded Resource Guide

While the shelter app currently exists and has been paid for, the expanded digital version of the resource guide has been designed and is in pre-development stage via Biztech. The following screenshots are from a pre-conceptual design given to Biztech to design the app. Screenshots from that pre-conceptual design are provided here to give a sense of some of the advanced features the app would provide.

When opening the proposed expanded app, you would have the option to sign in as a participant, or co-pilot, or access the shelter finder without any sign in barriers.

Participants enrolled in UPLIFT would be able to access a messenger service to communicate with their co-pilot without having to obtain access to their private information. They would also be able to get a snapshot of their progress, as well as have access to digital resource guide.

Our outreach/emergency response staff would utilize this app if and when they received calls from community partners that interface with Homeless Individuals facing emergency situations. The user friendliness of the app, walks them through what type of resource or service they need, as well as any information or requirements they would need to know what the service is, as well as immediate hours, contact and transportation options.
