Scope of Work- Pine Hill Bridge over Swain Slough- GeotechTask 1- Project Management**Task 1.1 – Project Management**

Project management as related to additional Bridge Foundation Investigations.

Task 3 – Preliminary Engineering**Task 3.3- Advance Planning Studies & Type Selection Report**

Time to review new site specific information and to revise the analysis with the new site specific results developed by SHN.

Task 5 - Geotechnical Investigations & Foundation Report**Task 5.3 – Bridge Foundation Investigation**

Geotechnical investigation and analysis is required due to the soft silts and clay deposits at the project site. SHN have received a proposal from Langan Treadwell Rollo to complete a site-specific design response spectrum, an additional requirement due to the soil conditions at the project site. This additional effort is required by the Caltrans Seismic Design Code.

- SHN will identify and research the additional work required and will incorporate the results.
- Langan Treadwell Rollo (LTR) will to develop site-specific design response spectrum consistent with the guidelines presented in Appendix B of Caltrans Seismic Design Criteria (2013) including the recommended attenuation relationships.
- LTR will perform a Probabilistic Seismic Hazard Analysis (PSHA) and deterministic analysis to develop site-specific horizontal response spectrum for the project. The PSHA is defined as having a 5 percent probability of exceedance in 50 years (975 year return period) and the deterministic spectrum is the median spectrum on the governing fault(s) with appropriate minimum spectrum check. The design spectrum will be based on the envelope of the PSHA and deterministic spectra.
- Because the site is underlain by soft strata (VS30 less than 150 m/s or one or more layers of at least 5 feet thickness with a shear wave velocity less than 120 m/s), LTR proposes to perform ground response analysis using computer program DEEPSOIL.
- LTR will develop firm soil spectra for both the PSHA and deterministic levels of ground shaking and spectrally match five time histories to use as input into the DEEPSOIL model.
- LTR will present detail of our analyses and the digitized design response spectrum in a written report.
