RISING GOAT LIMITED ADDENDUM #1 TO CANNABIS CULTIVATION APPLICATION

Cannabis Application #PLN-2020-16188 APN #223-101-004

1400 ROSS ROAD; GARBERVILLE, CA 95542

The following comments and changes relate directly to the first set of corrections and questions posed by Megan Ryan and Cliff Johnson:

First and foremost, the review omits the fact that this is a Three Phase project. Year 2020 is 10,000 square feet, Year 2021 is 15,000 square feet and Year 2022 is 18,000 square feet.

- 1. Legal documentation and proof of ownership, showing the officers, directors, owners and stockholders Rising Goat Limited *is shown in Exhibit A*, which includes copies of the ownership and authority documents filed with the County of Humboldt and the Secretary of State of the State of California.
 - 2. Ecological matters will be submitted directly by Natural Resources Company of Eureka, CA
- 3. Road Evaluation report will also be submitted by Natural Resources Company of Eureka, CA. Ross Road is not a two lane paved road, nor is the County road known as Dyerville Loop.

The County of Humboldt maintains the gravel road known as Dyerville Loop. Ross Road is maintained by a private homeowners association. Both are graveled and well maintained. A non-toxic galvanized culvert is used at the lowest point of Ross Road, between Dyerville Loop and the Cultivation site. Ross Road is approximately 30' wide and adequate for the three (3) cars and two (2) trucks that will be on that road to service the cultivation site twice (2x) per year. Currently, three (3) cars have traveled Ross Road to the cultivation site for at least one (1) decade. There will not be additional vehicles placed on Ross Road as a result of the cultivation site becoming a legal operation.

Property owners request that the County Planning Department please advise them as soon as possible if it is necessary to seek a Use Permit waiving portions of the requirements for the Ross Road access namely the Code requirement for a two (2) land paved road.

- 4. No timberland conversion permits were obtained by the numerous prior owners of the property that the current owners are aware of. This timberland conversion issue will also be addressed in a complete timberland conversion. Please note on the phased plans that all open sites and areas of timberland conversion will be replanted with native grasses and the plan will show the location for eight (8) white oak trees (a native species) of 15 gallon container per tree. The additional ordinance requirements will be met by Natural Resources.
- 5. Discussion with Cliff Johnson and the site visit will resolve this apparent error in estimation of slope percentage of steepness, because the actual slope of the entire cultivation area is between 5%-6%.
- 6. The well information is provided on page 11 with the County Permit #DEH 16/17-0123. Discussion with Cliff Johnson revealed that the drilling well logs are already filed in the County well permit files on microfiche.
- 7. The documents filed with the State of California Water Resources Board are held by Natural Resources and will be delivered directly to the County.

- (a) The entire parcel map with a pull out of the cultivation site is submitted herewith along with the changes necessary and additional notes on the plans.
- (b) It is true that the septic location is different on each sheet. Please note that each sheet represents the phases of the cultivation site. The existing septic tank was installed by prior owners without County permit. Therefore the current owners will be removing the existing septic tank (obviously fulfilling any of the County mitigation procedures) and placing the new one in a different location in subsequent phase(s)
- (c) Ross Road and Dyerville Loop are noted on plans. Please review.
- (d) Please note any creeks and wetlands noted on the plans. Please review.
- (e) Setbacks from parcel lines have been noted on the attached.

 Existing Buildings are all shown on the plan labeled Year 2020.

 Proposed structures are shown on plans labeled Year 2021 and 2022.
 - Cultivation area is shown on the plans. Please review.
 - Please also see the addition of the insert on plans showing location of cultivation site on the parcel.
- (f) Location of all water tanks and their sizes are shown on the revised plan attached and also were previously noted on page 11 of the original submission. Please note that number of tanks and their storage capacity is corrected to the following numbers:
 Four (4) three thousand gallon (3,000 gal) tanks; and, One (1) two thousand five hundred gallon (2,500 gal.) water tank. Additionally, in order to fulfill the requirements of the California Division of Forestry water tank(s) totaling five thousand gallons (5,000) of dedicated water for firefighting.
- (g) See submission by Natural Resources. Any past changes to timberland area or grasslands were done by prior owners and current owners are willing to mitigate as required by the County Cannabis Board and the Planning Department.
- (h) Parking is addressed in the plot plan submitted herewith and the number of spaces needed is three (3).
- (i) All distances required by the ordinance have been noted and are accurate on the plot plan submitted herewith.
 - No offsite neighboring residences are within three hundred feet (300') of the cultivation site. Please review aerial photographs.
- 9. (a) Activity schedule is attached hereto and should be attached to the submittal as Exhibit F.
 - (b) Non-renewable Energy, Paragraph, Page 8 of original submission with these changes -Generator will provide 20%
 - -Solar panels and system will provide 80% of power needs
 - (c) A native crawling plant is the only invasive species on the cultivation site and covers an area of approximately two hundred square feet (200'). Diverse wildlife eat the berries, including songbirds, deer, bear, and other large and small mammals. It is of notable pollinator and nesting material value for native bee and bumble bee species. This blackberry species is a larval food source for the western tiger swallowtail butterfly (*Papilio rutulus*), the mourning cloak butterfly (*Nymphalis antiopa*), the gray hairstreak butterfly (*Strymon melinus*), and the spring azure butterfly (*Celastrina ladon*). Americans, such as the Kumeyaay, Maidu, Pomo and Salish peoples, used *Rubus ursinus* as a fresh and dried fruit source and as a traditional medicinal plant.
 - (d) Native soils are not planned to be used for anything. Imported soils will never be dumped on the native soils. Please note on revised plan attached where the imported soil will be stored with protective barriers so that there is not any runoff and a non-permeable layer under the storage area in order to protect the native soils.

(e) The matter of employees (none) and others who will be present on the cultivation site has been addressed in the original submission at Page 2, final paragraph at bottom and on Page 3, top paragraph.

Thank you for your further consideration and review.

Dated. March 3, 2020

A. INTRODUCTION

The property, consisting of approximately 22 acres and that is the subject of this application was acquired by "Rising Goat Limited" on July 2, 2019. Rising Goat Limited is owned by *Ryan C. Parker and Mitchell A. Leffel, who are the sole stockholders*. Mr. Parker, Mr. Leffel and Paul F. Soares are the sole officers and directors.

Over the past several years, various departments of Humboldt County have seen many differing proposals for the conversion to legal cultivation on this property. This proposal is simpler, more environmentally friendly, addresses required corrections and concerns that the County had made in applications made by past owners of the property.

Rising Goat Limited proposes:

- the project is proposed in *three (3) phases of increasing cultivation area over a period of three (3) years*, instead of the maximum cultivation acreage to be planted in a short period of months:

```
2020 – 10,000 square feet – outdoor hoop tents – no lighting
2021 - 15,000 square feet – 50% outdoor hoop tent – 50% mixed light
2022 18,000 square feet – 100% mixed light
```

with the final total of 18,000 square feet, which is substantially less than a prior proposal for 43,560';and,

- there is not any cultivation proposed on the northwest portion of the property, which is an area above the Dean Creek Watershed. Any potential concern caused by past proposals that would produce above or near to the watershed on this portion of the property are eliminated¹; and,
- all appurtenant structures are either demolished or permitted; and,
- the cultivation area is clustered on less than a one and three quarter acre area (1.75 ac) of the twenty two acre (22+ ac) property; and,

¹ Potential runoff from the other parcel that is across Ross Road from the cultivation site is equally eliminated in the drainage plan proposed herein.

- the cultivation area is entirely located on a mostly flat plateau and *not visible to other neighbors*; and,
- no nursery, no manufacturing and no processing is proposed², which eliminates the related traffic, water and sewage needs of employees; and,
- no new native soils disruption is anticipated as the farming method employed is growing in large pots placed upon waterproof floors as well as the use of the existing plateau; and,
- *all soils in pots is reused* in subsequent crops eliminating the need for disposal after each crop; and,
- state of the art *whisper generator combined with solar energy* achieves a minimum of decibels of sound for concern on property and no concern for sound that might have traveled to neighbors; and,
- state of the art glass *greenhouses using covers that will block 100% of risk of light pollution* at night and will totally replace the conventional hoop tents over the phase in period; and,
- a new facility for drying and trimming will be built, and permitted, and that complies with building codes and that meets both County and State Health Codes; and,
- Existing 3 bedroom home, without permit, will be demolished eliminating a fire danger, excessive water use and related sewage needs; and,
- All new buildings will have slant roofs with gutters that put *rain water flow from roofs into water collection tanks* decreasing some of the water use from springs and the aquifer.

This proposal provides a substantial improvement for a previously abused and sub-standard property that grew unlicensed cannabis for decades. An area of Ross Road as intersected by Dyersville Loop will now have a five thousand gallon (5,000 gal) tank for fire fighting and large T shape turnaround for fire vehicles, which is an improvement that contributes to the health and safety of the entire Ross Road neighborhood, where several elderly people reside.

The owners are two (2) families, who are also the sole operators, and cultivation is by a family owned business. At no time shall operations utilize the service of employees. Therefore, the applicant is exempt from MCRSA Section 19322(a)(6),(a)(9) and is not an "Agricultural"

² With the exception of drying and trimming of harvested cannabis.

Employer."

B. SITE

- 1. The property is located at 1400 Ross Road on APN #223-101-004 on Mail Ridge near to, but many miles outside of the city limits of Garberville, Redway and Alderpoint in Humboldt County, California.
- 2. The *cultivation site* is accessed on Ross Road, which is a private road intersecting

 Dyerville Loop Road, which is a county maintained road. The recorded Road Maintenance

 Agreement for Ross Road is attached as Exhibit C. The Board of Directors of the Maintenance

 Association is very active and the road is well maintained.
- 3. The parcel is approximately twenty two (22) acres and sits at an approximate elevation of two thousand eight hundred feet (2,800'). See Site Plan for elevations and contour lines.
- 4. A *portion* of the parcel is within the upper Dean Creek Watershed and the entire property is zoned as follows:

-Agricultural Exclusive with Special Building Site Six (AE-B-6)

The property fronts on both Dyerville Loop and Ross roads. See Exhibit B.

- 5. The access driveway is located at 1400 Ross Road, where Ross Road bisects the property splitting it into two (2) parcels: west side of the road is approximately 7.5 acres and the east side is approximately 15.5 acres. There are access driveways onto each of the two parcels from Ross Road, that face each other³. Although split into two (2) parcels by Ross Road, the property exists under a singular parcel number on Humboldt County tax rolls. **See Exhibit B and Site Plans**.
- 6. The *cultivation area* designated for Cannabis is clustered on a fairly flat plateau along the 2,840' contour line, and between the 2,800' and 2,880' contour lines shown on the map *and*

³ Although split into two (2) parcels by Ross Road, the property exists under a singular parcel number on Humboldt County tax rolls.

located entirely on the eastern parcel.

- 7. The overall natural slope of the parcel is between fifteen to thirty percent (15%-30%).
- 8. The proposed cultivation area is only the area that has been used for illegal cannabis cultivation and equipment storage and appurtenant structures for decades. No new site expansion nor disruption is planned.

SUBSTANTIAL CHANGE TO PRIOR SUBMISSIONS:

- 9. **There will not be any cultivation** on the 7.5 acre portion of the property that is on the northwest side of Ross Road.
- 10. No tree removal nor other site improvements are planned on the northwest side of the Parcel across Ross Road from the cultivation site.
- 11. Native trees in a minimum container size of fifteen gallons (15 gal) will be planted to replace each tree removed on the 22 acres.
 - 12. Native grasses and cover crop will be planted and maintained on nearby soils.
- 13. All mechanical equipment and generators have been moved to the back portion of the cultivation site and will have mufflers installed, so that sound at the property lines is less than sixty (60) decibels.

C. PAST CULTIVATION.

- 14. During the year 2008, the quantity and intensity of use of greenhouses increased substantially as compared to prior years and is shown in the aerial photographs submitted herein.
- 15. The site has had cannabis and vegetable light deprivation green houses with appurtenant storage and equipment parking structures since the early 1990's and possibly for decades prior.
- 16. A residence exists that is proposed to be removed and is subject of a *pending demolition* permit with the County of Humboldt. Rising Goat plans to *submit building permit applications* at a later date for replacement of the residential building with seasonal housing.
- 17. The review of publicly available satellite imagery shows that the site has been used for residential purposes, cultivation of Cannabis and livestock grazing in the past.
- 18. The cultivation of Cannabis is shown for the first time on satellite imagery in 2009. Satellite imagery for 2015 is blurred for that year.
- 19. The first clear image of past cultivation is from Terra Server on June 16, 2010 and shows scattered and hidden cultivation totaling nineteen thousand five hundred square feet (19,500' sq).
- 20. The next image is from Google Earth on May 28, 2014 which shows an expansion of the site early in the season to a total of approximately 21,000 square feet.
- 21. In 2015, the growing area was increased with additional green houses. Although the northeastern outdoor area is shaded, and cultivation appears to have concluded, interviews with the past owner(s) reveal cannabis production in that area as open area production without greenhouse. The additional outdoor open area production in that year was approximately 80' x 120' providing an additional 9,600' square. The 2015 total Cannabis growing area was

approximately 31,000' square including indoor and outdoor.

22. On November 4, 2015, the TerraServer imagery shows the outcome of that season, including further greenhouse development. However the northeastern outdoor area is shaded and although cultivation cannot be proven in the shaded area by satellite imagery, interviews with the growers has provided proof that the shaded area was also used for outdoor summer production. The total cultivation for 2015 was twenty three thousand eight hundred seventy five square feet (23,875sq ft) visible and the additional nine thousand six hundred square feet (9,600sqft) outdoor in shadows under the forest canopy for a total of thirty three thousand four hundred seventy five square feet (33,475sq ft). The cultivation had mixed light of 5,400' square with the remainder being full sun outdoor.

D. ENERGY CONSUMPTION

- 23. Power is provided by sources that are alternatives to Pacific Gas & Electric company and is as follows:
- (a) Generator: Tier 4 Gasoline -fueled generator⁴ to meet thirty percent (30%) of the proposal power needs⁵; and,
- (b) Solar system (currently installed) to provide the additional fifty percent (70%) of the proposal power needs.
- 24. The existing power sources meet the requirements for alternative power supply as recommended by the Humboldt County Planning and Building Departments. The installation of the new generator and the new fuel storage tank is planned to be completed after an application for permitting is submitted to and approved by the Humboldt County Building Department in compliance with Referenced Codes: 2012 International Fire Code, 2012 International Building Code & 2011 National Electric Code.
- 25. During 2020 and 2021, the power needs will be provided entirely by the existing solar system, with a gas generator back up. *The maximum cultivation area proposed will not be fully achieved until some time after 2021*.

⁴ Location of fuel storage and its compliance with the appropriate codes is discussed later in the proposal.

⁵ The manufacturer's specifications are stated in relevant part as: - Dimensions (L x W x H Inches): 72.00 x 31.00 x 50.30; Weight: 1422 lbs; and, Sound Level: 65 dB(A) at 23 feet. The generator is backed into an existing concrete structure area, that is cut into the hillside, allowing further sound reduction and concealment of the equipment.

E. SECURITY AND SAFETY

- 26. The proposal complies with the security requirements of the State of California for licensed marijuana grows:
 - (a) camera resolution of 1280 x 720 (720p) pixels and no less than 15 frames per second.
 - (b) Cameras and storage are Internet Protocol (IP) compatible.
- (c) Cameras will be placed at the singular entrance and exit driveway onto Ross Road, and record from both indoor and outdoor vantage points 24 hours a day with no interruptions regardless of lighting or conditions.
- (d) All fencing and gates surrounding growing operations will be monitored at least 20 feet beyond the perimeter.
- (e) The California mandate requires that cameras generate approximately 13 GB of data per day, and surveillance cameras to record continuously (24/7 year-round) wherever and whenever cannabis is present on the property.
- (f) Regulations governing the cannabis industry in the state of California require video footage to be kept for a minimum of 90 days.
- (g) Each greenhouse, outdoor growing areas and processing⁶will also have exit, entrance and processing point surveillance cameras as well as being locked at all times.
- 27. The cultivation site will be secured and visually obscured from Ross Road at the most distant feasible area for production.
- 28. Appurtenant drying and processing facilities, equipment storage and trash storage⁷ shall be secured and locked at all times. All trash shall be in containers that are wildlife proof

⁷ Trash Storage will include separate containers for chemical containers and bags, trash and recyclables with a weekly plan for hauling and dumping.

⁶ The term 'processing' as used throughout the proposal refers to only the activities of trimming and drying.

and fenced on the allowable 10'x 20' outdoor storage area and will contain ceiling fencing to protect birds and climbing animals from entering.

- 29. Hoop houses will be secured and monitored at entrance and exit points.
- 30. The entire premises is entered at one point on Ross Road and fenced with 8' fencing secured with either steel stakes in concrete or 6'x 6" pressure treated fence posts secured in a minimum of 2 bag concrete with rock.
- 31. The electric controlled gate with fire department KNOX box will remain locked at all times.
- 32. KNOX Box and Gate will be marked with a sufficient number of reflectors to be seen at night or at any time of visual imparity, including heavy smoke.
- 33. Operations shall implement safety protocols to protect the health and safety of its family members and customers, with adequate safety training relevant to their specific job functions, which may include:
 - (a) Potable well water and bottled water.
 - (b) Temporary Construction type sanitary toilet and sink, with weekly or more often as needed cleanouts by a licensed company.
 - (c) Family members are encouraged to receive training and certification in basic CPR & First Aid.
 - (d) CPR and First Aid Kit onsite

F. WATER

- 34. Water is supplied by a *well that is permitted*, #DEH 16/17-0123, and is two hundred foot (200') deep, has a depth to the first water at fifty feet (50') below the surface, and has an estimated yield of twenty five gallons per minute (25 gpm). It is drilled through multiple layers of gravel, sand, clay, and the Franciscan sandstone with screens at different levels.
- 35. The well is taking shallow jurisdictional subsurface stream flows from an unconfined aquifer at fifty feet (50') due to the forty feet (40') to seventy feet (70') intake screen.
 - 36. Water storage for the cultivation site is accomplished as follows:
 - (a) 5,000 gallon tank dedicated to fire fighting to be installed; and,
 - (b) *Existing water storage tanks*⁸ holding a total of 12,500 gallons:

-three (3) 2,500 gal tanks

-one (1) 5,000 gal tank

Total on site storage of water today:

12,500 gallons

After installation of the new fire tank

17,500 gallons

The stored water (without counting the fire fighting water) can support up to one (1) week of water needs for the entire cultivation site (12,500 gal) in peak water use season.

- 37. The cultivation utilizes a permitted well (#16/17-122), which is two hundred feet (200') deep and has an output of twenty five gallons per minute (25 gpm). The well water services both the cultivation and any seasonal residents.
- 38. All existing new roofs will be on a singular slant of approximately 45 degrees thereby pouring all roof rain water and melting snow into gutters that collect water and store it in plastic tanks for irrigation use.
 - 39. The five thousand gallon (5,000 gal) tank required by CDF will also be filled by well

⁸ Water is pumped up hill from the permitted well into storage tanks located at the 2,920' contour line approximately at the northwest intersection of Ross Road and Dyerville Loop.

water.

- 40. Water use v. available water is shown below. The available water is based upon the test rated twenty five gallon per minute (25 gpm) well reduced to eighty percent (80%) efficiency or twenty gallons per minute (20 gpm). With 80% efficiency and water use as shown below, even at Phase 3 maximum cultivation shows that only 42.44% of the available water from the well will be used.
- 41. This project has enough well water available to be sustainable even if the State were to reduce allowable water use from the well by 50%.
- 42. The property has water rights to a nearby spring, but does not anticipate needing that water for the cultivation site, nor has it used any of the spring water for the last several years.

G. CAL FIRE REQUIREMENTS.

- 43. The gated driveway is expanded to twenty feet (20') wide and the frontage on Ross Road is one hundred eighty feet (180').
- 44. An SRA Regulation T shape turnaround for a sixty foot (60') long emergency vehicle is noted on the site plan.
- 45. A five thousand gallon (5,000 gal.) SRA tank located at the corner of the driveway gate and Ross Road with the following specifications:
 - (a) 100' from all flammable vegetation and trees
 - (b) A minimum of 4' and maximum of 12' from the driveway and road
 - (c) A minimum of 50' and maximum of 1/4 mile from all of the buildings that it serves.
 - (d) A four and a half inch (4.5") N.H. rated male fire hose fitting.
 - (e) At least one three inch (3") reflector on the tank.
 - (f) At least one three inch (3") reflector on a post within three feet (3') of the fire connection valve.
 - (g) Tank location and fire protection perimeter (flammable vegetation and trees) requires removal of at least two (2) trees (live oak and a white pine)⁹.
 - (h) All reflectors will be Blue Dot.
 - 46. Fire Extinguishers will be located at all structures as follows:
 - (a) Class A extinguisher at least one at each hoop house, structure and enclosed garbage area.
 - (b) Class B extinguisher at least one at all structures and equipment storage areas.
 - (c) Class C extinguisher one at each of the generator and solar system locations.

Annually, all fire extinguishers will be inspected, re-charged or replaced annually by a fire extinguisher company licensed by the California State Fire Marshall. All fire extinguishers will

⁹ Permit is required and will be applied for to the Humboldt County Planning Department.

be mounted where visually easy to find and will have Blue Doe reflectors equivalent to those on water storage tank.

H. WASTE WATER, DRAINAGE & RUNOFF

- 47. Waste water is treated on-site with an unpermitted septic system, which will be removed and replaced with a permitted septic tank in a new permitted location. The location of the new septic tank is more than one hundred feet (100') from the water well.
- 48. Irrigation will focus on minimal use of water through the use of drip irrigation systems and planting pots of 30 gallon size or greater for retention of irrigation water.
- 49. Irrigation will be done early morning and early evening and shall be of an agronomic rate that will not exceed past the root zone.
 - 50. Hygrometers are used to determine proper irrigation amounts and methods.
- 51. Ground cloth (dark charcoal or black) will be used in all green houses and outdoor cultivation areas in order to reduce evaporation rates.
- 52. The cultivation area is located along the ridge of the upper Dean Creek watershed. The main road to the farm is Dyersville Loop which is a county maintained road. In order to access the site, Ross Road, a well maintained two lane private dirt and gravel road, is used. The Ross Road Maintenance Agreement is attached hereto.
- 53. The cultivation area is on the same contour as the watershed. There is an ephemeral stream adjacent to the southern side of the cultivation area. Due to the tight nature of the cultivation area with sharp slope to the western side of the parcel, there is potential for discharge to occur. Therefore all greenhouses and areas of potential water flow are surrounded by State approved water absorbing bags filled with materials approved by the State of California.
- 54. **Erosion Control and Runoff Measures.** The following erosion and runoff control measures are proposed:
 - (a) All measures of the Water Resources Protection Plan shall be implemented.
 - (b) Internal policies and training to employees that shall minimize discharge from farm related activities.
 - (c) All road surfaces shall be graveled.

- (d) Soil Beds within the enclosed growing houses shall be contained and methods implemented to reduce soils loss to the outside.
- (e) Cover crops shall be utilized.
- (f) Straw and bags and other erosion control methods shall be placed on the ground surrounding the cultivation areas.
- (g) A wildfire fuels reduction project shall be planned and implemented according to all regulatory requirements.
- (h) Internal policies and training shall minimize farm related activity discharge to the watershed.
- (i) Any compost bins shall be self contained.
- (j) Trash and recycling bins shall be fenced and secured. Bins will be dumped weekly at a local transfer station.
- (k) Cultivation shall be in raised beds or pots.
- (l) Mixing, tilling, and amending of soils shall occur within the raised beds.
- (m) Soils shall be reused, composted on site, and no dumping off site shall occur.
- (n) Composting shall consist of a dedicated area and be secure. Vegetative materials shall be chipped back into the compost pile.

I. FERTILIZERS, PESTICIDES, REGULATED PRODUCTS

- 55. The cultivation site intends to be an organic farm. Operations shall not be using regulated products.
 - 56. The Storage protocol is as follows:
 - (a) A permanent storage area of approximately 200 square feet or more shall be constructed with metal shelfs and concrete floor (poured with moisture barrier under concrete to protect from spill potentially soaking through the concrete to the soils.
 - (b) Cleanup and containment protocols shall be developed and implemented to minimize or eliminate any discharge from containers.
 - (c) Cleanup and containment equipment shall be maintained in good operating condition onsite at all times.
 - (d) Safe handling practices and protocols shall be developed for using cleanup and containment equipment.
 - (e) Agriculturally exempt products that may be used, on occasion and as needed, on the cultivation site over time and listed, in part, in **Exhibit**

LEGAL DESCRIPTION

EXHIBIT "A"

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF HUMBOLDT, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL ONE

Early Laborator

.

Parcel 10 as shown on Parcel Map No. 819 on file in the Office of the County Recorder of Humboldt County in Book 7 of Parcel Maps, pages 45 through 52, inclusive.

PARCEL TWO

A non-exclusive right of way for ingress, egress and public utilities and pipelines over and in all the roads shown on said Parcel Map.

PARCEL THREE

The right to take and use from spring Parcel No. 8 as shown on the survey by Don Bushnell dated October 1976 up to 1500 gallons of water a day for the benefit of and use on said Parcel 10 of Parcel Map No. 819.

PARCEL FOUR

The right to develop, install and maintain a water system on the spring located on the real property described below:

PARCEL A

The West Half-of the Southeast Quarter, and those portions of the Northeast Quarter of the Southwest Quarter, and the Southeast Quarter of the Northwest Quarter of Section 11, Township 4 South, Range 4 East, Humboldt Meridian, which lie East of the public road called Harris Road, being a portion of the land contained in the Patent recorded March 14, 1890 in Book 11 of Patents, Pages 86, Humboldt County Records.

PARCEL B

The Southwest Quarter of the Northeast Quarter of Section 11 in Township 4 South, Range 4 East, Humboldt Meridian, as contained in the Patent recorded July 23, 1909 in Book 21 of Patents, Page 49 Humboldt County Records.

This spring is located on the above described parcel approximately 150 yards in an Easterly direction from the public road called Dyerville Loop Road.

Together with an easement 10 feet in width for the purpose of developing and maintaining a pipeline running from the above referred to water system in a Westerly direction over the above described property to the public road called Dyerville Loop Road.

Together with the right to 50% of the water from the above referred spring.

Being the same as granted in deed recorded July 28, 2004, as Instrument No. 2004-25378-2, Humboldt County Official Records.

APN: 223-101-004

ROAD MAINTENANCE AGREEMENT

KENNETH R. WALLAN, MEREDITH WALLAN, JAMES O. JOHNSON, and ANITA M. JOHNSON, hereinafter called "Developers", presently own real property in Southern Humboldt County, California, popularly known as "the Overland," subdivision, particularly described in Exhibit "A", attached hereto and incorporated herein by this reference, and the undersigned, hereinafter called "Owners" are purchasers of a lot or lots in the Overland subdivision.

There runs through said subdivision a system of roads which roads are particularly described in Exhibit "B", attached hereto and incorporated herein by this reference.

Both Developers and Owners, for their mutual benefit, wish to enter into an agreement among themselves concerning maintaining and repairing said roads.

Based upon the above, it is hereby agreed by Developers, their heirs, successors and assigns and Owne ;, their heirs, successors and assigns, as follows:

Article I. Covenants Running With The Land

All lots in the subdivision shall be held, sold, and conveyed only subject to the covenants, conditions and restrictions herein, which shall constitute covenants running with the land and shall be binding on all parties having any right, title, or interest in the lots in said subdivision, or any part thereof, their heirs, successors, and assigns and shall inure to the benefit of each owner thereof.

WhisperWatt™

Prime Rating — 20 kW (25 kVA) Standby Rating — 22 kW (27.5 kVA)

Three-Phase, 60 Hertz, 0.8 PF

STANDARD FEATURES

- Heavy duty, 4-cycle, direct injection, heated crankcase vent, turbocharged diesel engine provides maximum reliability.
- EPA emissions certified Tier 4 final emissions compliant.
- Microprocessor engine control system maintains frequency to ±0.25%.
- Full load acceptance of standby nameplate rating in a single step.
- Fuel/water separator removes condensation from fuel for extended engine life. Panel mounted alarm light included.
- Sound attenuated, weather resistant, steel housing provides operation at 65 dB(A) at 23 feet. Fully lockable enclosure allows safe unattended operation.
- E-coat and powder coat paint provides durability and weather protection.
- Internal fuel tank with direct reading of fuel gauge.
- Spill containment Bunded design protects environment by capturing up to 124% of engine fluids.
- Brushless alternator reduces service and maintenance requirements and meets temperature rise standards for Class F insulation systems.
 - Open delta excitation design provides virtually unlimited excitation for maximum motor starting capability.
 - Automatic voltage regulator (AVR) provides precise regulation.

- Fully covered power panel. Three-phase terminals and single phase receptacles allow fast and convenient hookup for most applications including temporary power boxes, tools and lighting equipment. All are NEMA standard.
- ECU754 microprocessor-based digital generator controller.
 - · Remote 2-wire start/stop control.
 - Operational temperature range of -40° to 85° C.
- Digital engine gauges including oil pressure, water temperature, battery volts, engine speed and fuel level.
- Analog generator instrumentation including AC ammeter, AC voltmeter, frequency meter, ammeter phase selector switch, voltmeter phase selector switch, and voltage regulator adjustment potentiometer.
- Automatic safety shutdown system monitors the water temperature, engine oil pressure, overspeed and overcrank. Warning lights indicate abnormal conditions.
- Voltage selector switch allows easy to change voltages as your applications require.

SKID-MOUNT DIMENSIONS

TRAILER-MOUNT DIMENSIONS

DCA25SSIU4F Weights*	
Dry Weight	1,795 lbs. (814 kg)
Wet Weight	2,137 lbs. (969 kg)
Max. Lifting Point Capacity	5,150 lbs. (2,335 kg)

^{*} Weights do not include options.

DCA25SSIU4F and TRLR25US2 Weights* Dry Weight (with TRLR25US2) 2,239 lbs. (1,016 kg) Wet Weight (with TRLR25US2) 2,581 lbs. (1,171 kg)

Generator can be placed on MQTrailer Models TRLR25US and TRLR75XF2.
