DISCUSSION:

On March 22, 2022, your Board held a public hearing on the North McKay Ranch General Plan Amendment, Zone Reclassification, Tentative Subdivision Map, Planned Unit Development, Development Agreement, and Special Permit and unanimously approved a motion of intent to approve the project (5-0) with the direction for staff to bring a revised circulation element finding and condition of approval to allow for pedestrian and bicycle improvements as an alternative to traffic signals at two intersections. The Board also set an ordinance (Attachment 3A) approving the Development Agreement between Kramer Properties Inc. and the County of Humboldt for the North McKay Ranch Subdivision Project for adoption in April 2022.

Following the March 22, 2022 Board hearing, the Environmental Protection Information Center (EPIC) expressed strong disagreement with Final EIR's conclusion that it is infeasible to require mitigation limiting the development to the use of electricity for appliances, and disallowing natural gas, to reduce the significant impact of project operational greenhouse gas (GHG) emissions. The Final EIR had determined that generation of GHG from natural gas appliances would be a relatively small proportion of project-generated GHG, and that half of the electricity produced in the County is generated by the PG&E station which is gas-fired anyway, such that eliminating use of gas did not seem proportional to the impact. Subsequently, Stantec Consulting was asked to revisit the GHG analysis, including the feasibility of not allowing the use of natural gas in the project. Stantec found, in the Supplement to the Final EIR that following preparation of the Final EIR, the California Air Resources Board (CARB) made increased commitments to transition the electric grid away from fossil fuels. Both PG&E and the Redwood Coast Energy Authority policies also reflect CARB goals, and they intend to decarbonize all their electricity production. This now makes the requirement to develop an all-electric project technologically feasible, instead of merely transferring the impact of natural gas generated GHG emissions to another entity. This can be accommodated with a minor revision to the EIR, including modifying Mitigation Measure GHG-2 to disallow the extension of natural gas utilities as well as wood-burning stoves, which does not alter the conclusions of the analysis. Total project operational GHG emissions remain a significant impact that require the Statement of Overriding Considerations, but the impact is nonetheless reduced. The project applicant has agreed to this mitigation. This is addressed in Attachment 1F Supplement to the FEIR which modifies the FEIR.

The revised findings and condition of approval for pedestrian and bicycle improvements are included in Attachment 2 to this staff report. The condition specifically revises condition of approval 2.7(a) and 2.7(c) of the Public Works Conditions to allow an alternative set of improvements in-lieu of traffic signalization to enhance or improve pedestrian and bicycle connectivity including a with a complete streets program subject to agreement of county staff and the developer. This is addressed in the findings through the general plan support for ensuring that automobile level of service improvements do not adversely affect level of service and/or quality of service for other modes of transportation (General Plan Policy C-P4). The revised findings and mitigation measure are included in Attachment 1, CEQA BOS Resolution, Attachment 1A, Mitigation Monitoring and Reporting Program, Attachment 1E, the Supplement to the Final EIR, and Attachment 2, Entitlement BOS Resolution.
